# SUSTAINABLE DEVELOPMENT GOALS

**The life you're living  
right now,**

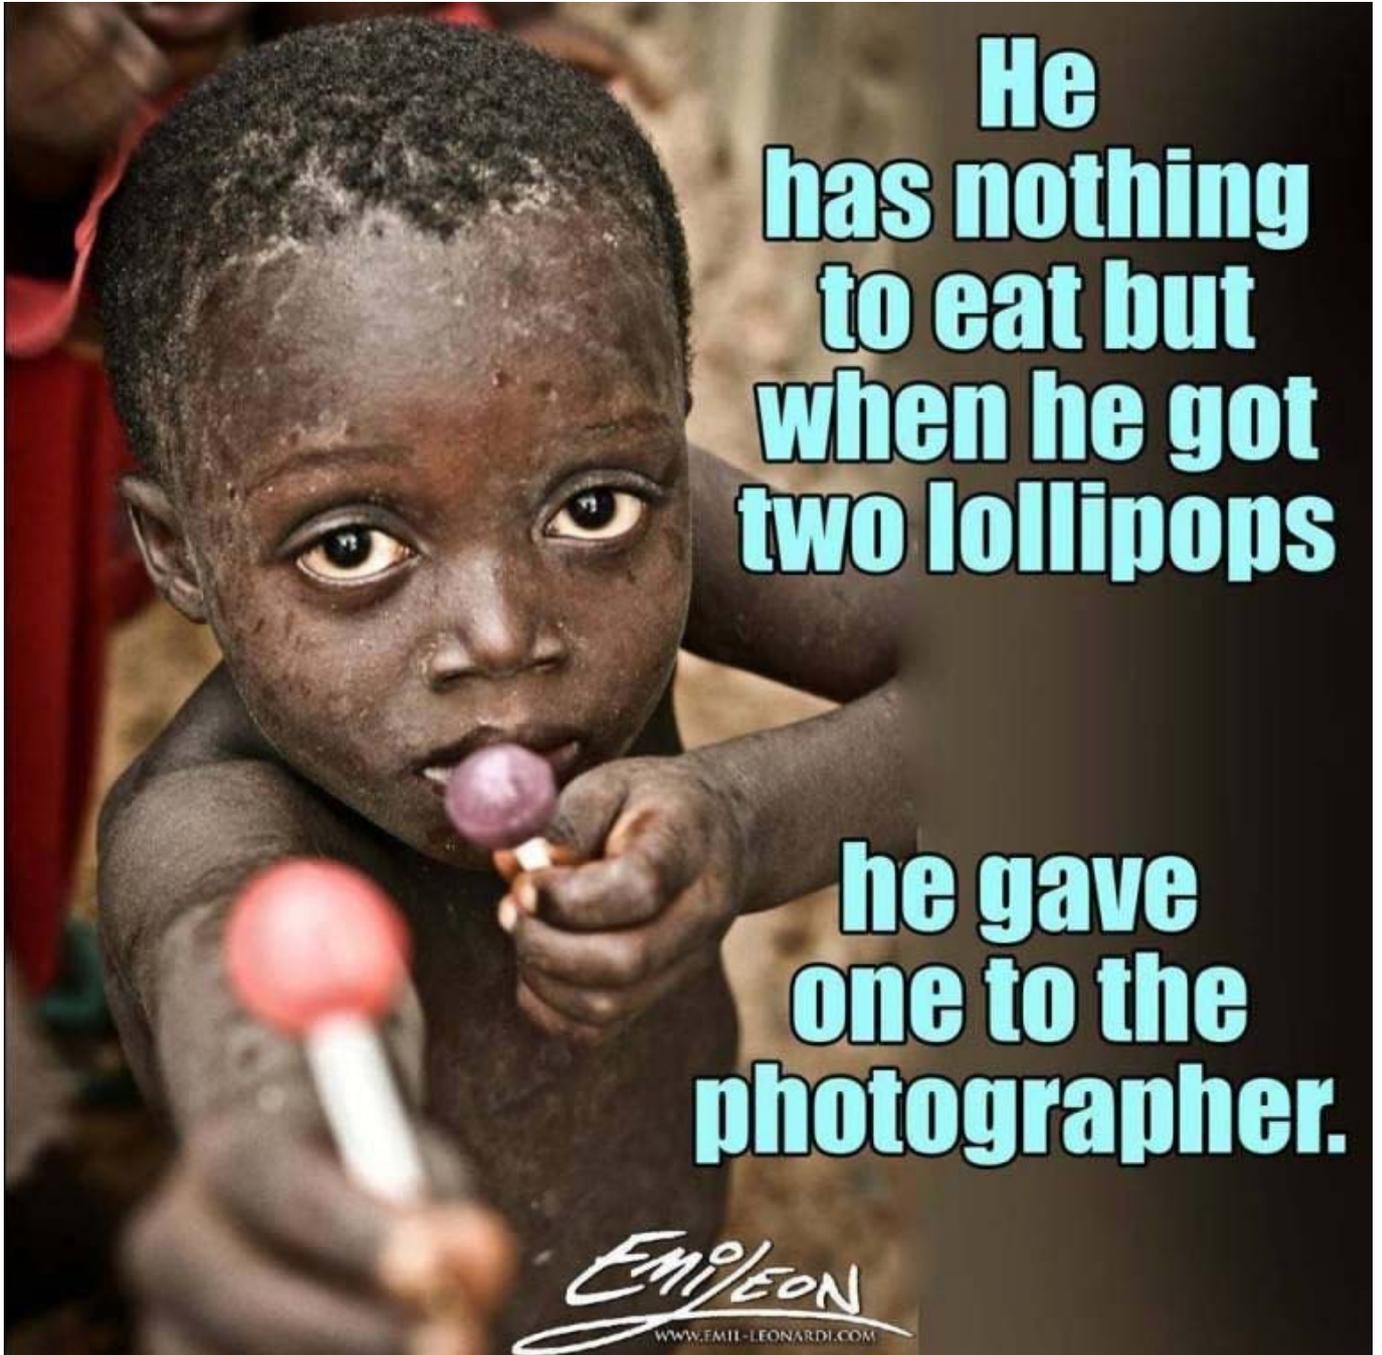

**Is the dream for many  
children . . . . .**

# The Man Who Is Crying Is A Doctor!

While he was distributing bread to the war struck children in Syria, the child told him:

**"Could you give me a medicine so that I won't feel hungry again?"**

All of the above is of the consequence of living through our minds.

## **Australia's AU\$2.1 trillion future with 672,000 jobs and net zero carbon dioxide emissions, etc.**

<https://www.dailytelegraph.com.au/technology/environment/australias-21-trillion-future-with-672000-jobs-and-net-zero-emissions/news-story/c1c943fc13ce526be2533d896f6ff9e8>

11 October 2021

Billionaires, blue collar workers and green groups have all joined forces for Mission Zero — a new plan to get Australians more jobs with a smarter, cleaner nation.

Australia is the best-placed nation on Earth to be the global winner in a net zero greenhouse emitting world, with more than 672,000 jobs created and AU\$2.1 trillion in economic activity generated by 2050.

Billionaires, blue collar workers, green groups and the national architect of the blueprint to net zero have all joined forces for Mission Zero — an unprecedented new project that reveals for the first time the enormous economic forces Australia could unleash by harnessing the clean energy revolution.

This includes construction of the world's largest solar plant, powering our (Australian) iron ore exports with hydrogen-fuelled machines and the rebirth of our mining industry as a global treasure chest of rare earths and other minerals.

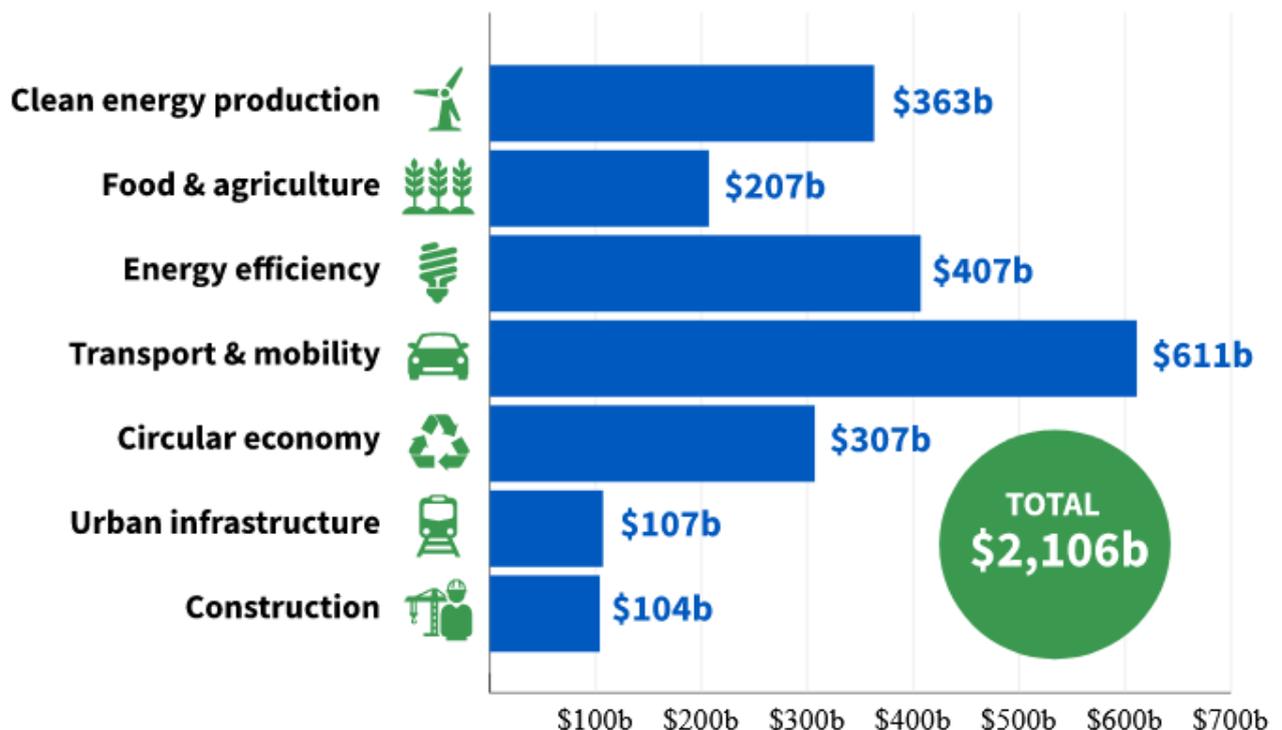

Research commissioned by News Corp shows the massive injection into Australian GDP (gross domestic product) would include a projected AU\$363bn in clean energy production – including renewable power and carbon capture – and AU\$407bn in the production of energy efficient products, including lighting, heating and cooling systems.

## Valuing Mission Zero

Business and employment opportunities for Australia on the path to Net Zero emissions

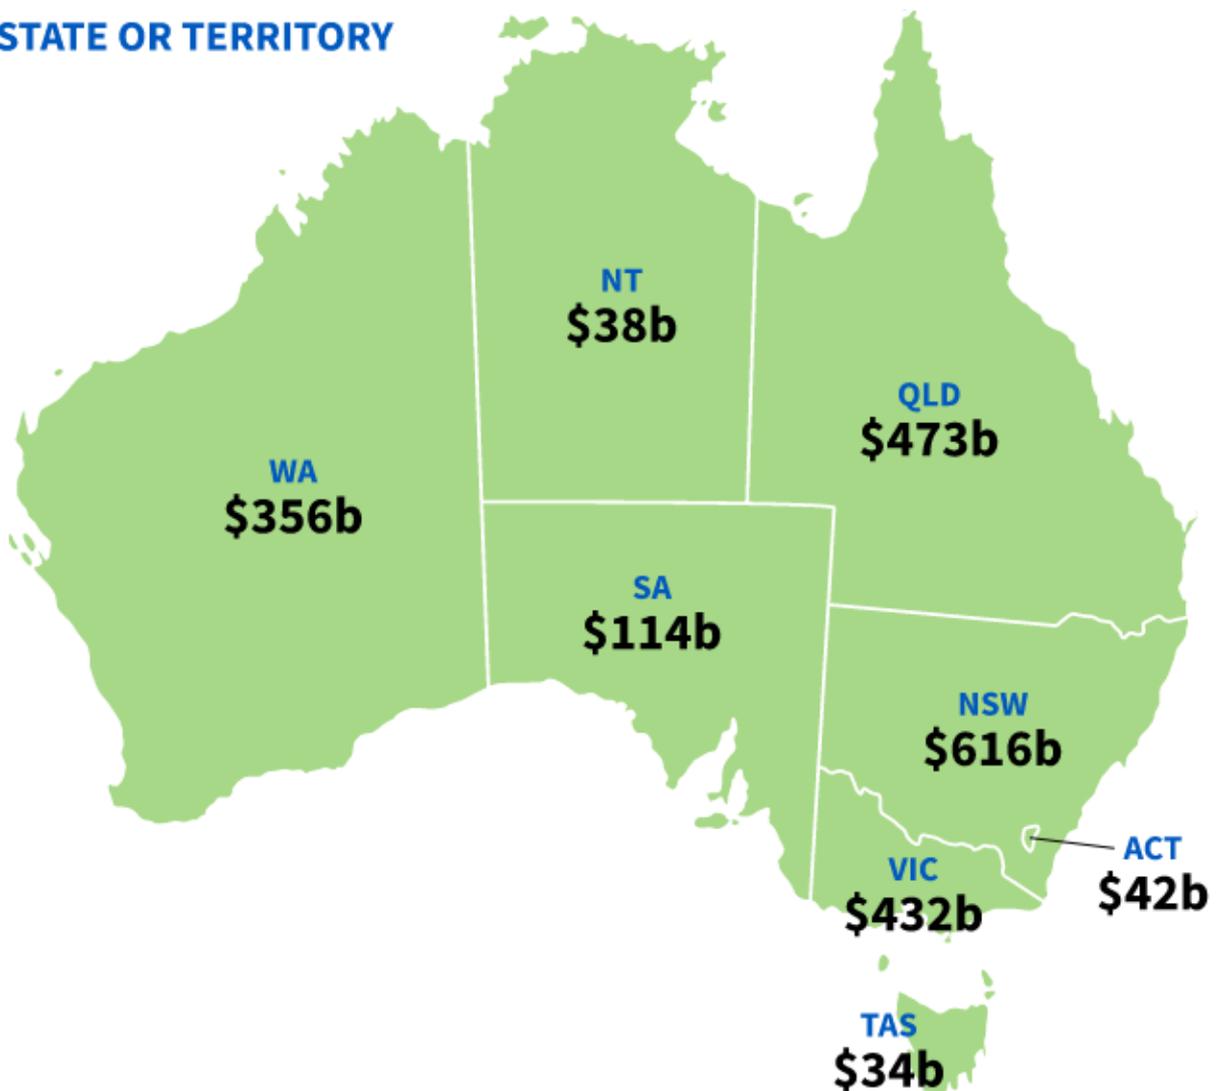

### ECONOMIC OPPORTUNITIES (2021-2050 CUMULATIVE)

## MORE THAN 672,000 JOBS WILL BE CREATED FOR AUSTRALIANS FROM MISSION ZERO BUSINESS OPPORTUNITIES BY 2050

### BY STATE OR TERRITORY

## STATE AND TERRITORY ECONOMIC OPPORTUNITIES

New South Wales	NSW	VIC	QLD	SA	WA	TAS	NT	ACT
Clean energy production	\$75b	\$46b	\$111b	\$20b	\$85b	\$6b	\$12b	\$8b
Food & agriculture	\$70b	\$44b	\$45b	\$11b	\$30b	\$3b	\$3b	\$2b
Energy efficiency	\$125b	\$91b	\$84b	\$22b	\$64b	\$6b	\$6b	\$8b
Mobility	\$188b	\$136b	\$126b	\$33b	\$96b	\$10b	\$9b	\$12b
Circular economy	\$94b	\$68b	\$63b	\$17b	\$48b	\$5b	\$5b	\$7b
Urban infrastructure	\$33b	\$24b	\$24b	\$6b	\$17b	\$2b	\$2b	\$2b
Construction	\$32b	\$23b	\$22b	\$6b	\$17b	\$2b	\$2b	\$2b
<b>TOTAL</b>	<b>\$607b</b>	<b>\$432b</b>	<b>\$475b</b>	<b>\$115b</b>	<b>\$357b</b>	<b>\$34b</b>	<b>\$39b</b>	<b>\$41b</b>

Source: Accenture 2021

There would also be an estimated AU\$611bn of extra economic activity in the transport and mobility sector, including the adoption of electric vehicles, plus AU\$107bn in urban infrastructure such as public transport and traffic systems.

New investment would be greatest in NSW, with \$616bn projected, followed by Queensland with \$473 billion and Victoria with \$432bn. Opportunities in WA total \$356 billion and in South Australia \$114bn.

The Valuing Mission Zero report was compiled by former prime ministerial economics supremo Andrew Charlton for global firm Accenture and draws on 56 separate reports and sources from around the world.

Asia-Pacific Sustainability Lead and Managing Director at Accenture Dr Andrew Charlton. Picture: Hollie Adams

“With our abundant renewable energy resources Australia is the best-placed nation in the world to benefit from net zero,” Dr Charlton, the Asia-Pacific Sustainability Lead and Managing Director at Accenture, said.

“There are trillions of dollars of new business opportunities across the economy in transport, infrastructure, utilities, resources, agriculture and construction.

“The transition to net zero will create hundreds of thousands of jobs. No matter what your skill level or where you live, there will be new jobs in farming, factories, transport and information technology.”

Billionaire entrepreneur Mike Cannon-Brookes, who is building the world’s largest solar farm in the Northern Territory, said Australia was perfectly positioned to be a world-beater in the new economy.

“We should be pushing the world to decarbonise because, literally, we will be one of the biggest winners on the planet,” he said.

“We can create a fast, stable and better economy with more jobs and everyone’s bills will be cheaper.”

Atlassian chief executive Mike Cannon-Brookes. Picture: John Feder

Mining magnate Andrew “Twiggy” Forrest, who is transforming his Fortescue Metals Group into a carbon neutral company, said the new economy would deliver massive opportunities for the mining industry and the regions.

“The time has come for people throughout the country, and in the country, to really be excited by the new future of sustainable energy and sustainable products which come from it,” he said.

How Australia could be number one in the new global economy

[Download Now](#) ↓

“They don’t have to say, well, we’re giving up fossil fuels, we’re taking huge risk. No, they’re just embracing an industry which they will be very good at.”

Coal miners’ union boss Tony Maher said a wealth of other minerals in Australia would keep Australian mining strong even as domestic coal consumption drew to a close and global coal demand gradually tapered off in the decades ahead.

“We’ve got every mineral there is. We’ll always have a strong mining industry,” the CFMEU Mining Division president said. “And we’ll have a strong coal industry for a long time to come.”

Andrew Forrest has carbon neutral plans for his company, Fortescue Metals.

Recycling king Anthony Pratt said Australian manufacturing would also thrive in the new environment.

“Australia has always been an innovation nation and I believe our manufacturing industries have a great future,” he said. “Australia has all the ingredients to lead our region in sustainable manufacturing – and we’re already doing that in many areas.”

Australian Workers Union national secretary Daniel Walton said workers had a bright future in both mining and manufacturing.

“Australia can and should be a 21st century green manufacturing powerhouse, but if we want that future tomorrow we need to keep the lights on today,” he said.

National secretary of the Australian Workers Union Daniel Walton. Picture: Grant Wells

“Australia has incredible opportunities in the resources of the future – hydrogen, sustainable timber, rare earths, uranium, lithium, the list goes on. But we shouldn’t limit our ambitions to exporting raw materials. If we want quality blue collar jobs to exist in the future, we have to be investing aggressively in the manufacturing industries of the future.”

Former Chief Scientist Alan Finkel, now the federal government’s Special Adviser on the road map to net zero, said Australia had unrivalled opportunities.

Dr Alan Finkel says getting to net zero has many benefits for Australia. Picture: Kym Smith

“Getting to zero will bring enormous opportunities for Australia’s export industries,” he said.

“Our industries and exporters will produce products for the new economy that will contribute to national economic growth. And it is easier to share the benefits equitably if our economy is strong and growing.

“Young and old can be part of the new economy, building our prosperity while eliminating the greenhouse gas emissions that are warming our planet and causing climate change.”

Australian Conservation Foundation CEO Kelly O’Shanassy said Australia needed to act now to seize the benefits.

Australian Conservation Foundation CEO Kelly O’Shanassy.

“Australia has enormous opportunity and could be the envy of the world, but it will take genuine national leadership to coordinate this push. And we need it fast,” she said.

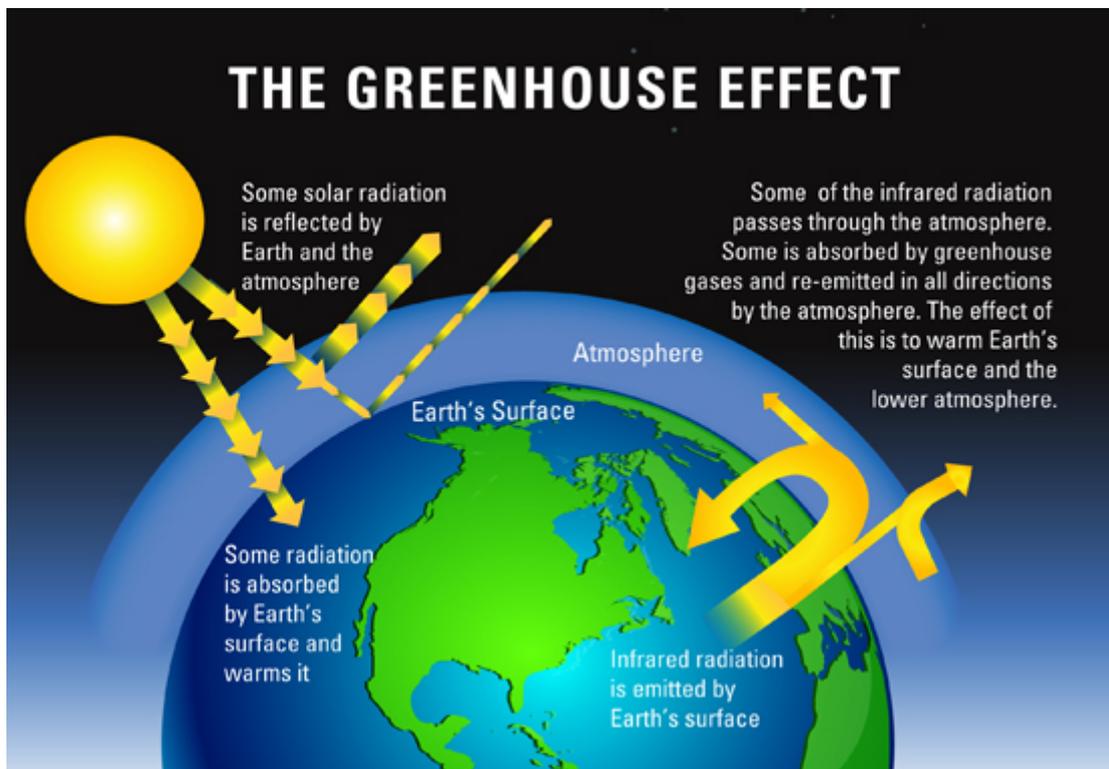

“We’re not the only nation in the world with the natural advantages, the technology and know-how to make us a clean energy superpower. There is a competition afoot and we need to be in it.”

**Kindly ask yourself:** Is this the way? Is this really the goal for us of Earth’s humanity? Are we to treat each other as commodities? Are we to control and own everything in sight? Are we to plunder the environment relentlessly? Truly, this is not our pathway home!

# Causes of Climate Change

[https://qknowbooks.gitbooks.io/featured\\_books\\_and\\_articles-earth-climate-change/content/causes\\_of\\_climate\\_change.html](https://qknowbooks.gitbooks.io/featured_books_and_articles-earth-climate-change/content/causes_of_climate_change.html)

## What then are the causes of this situation?

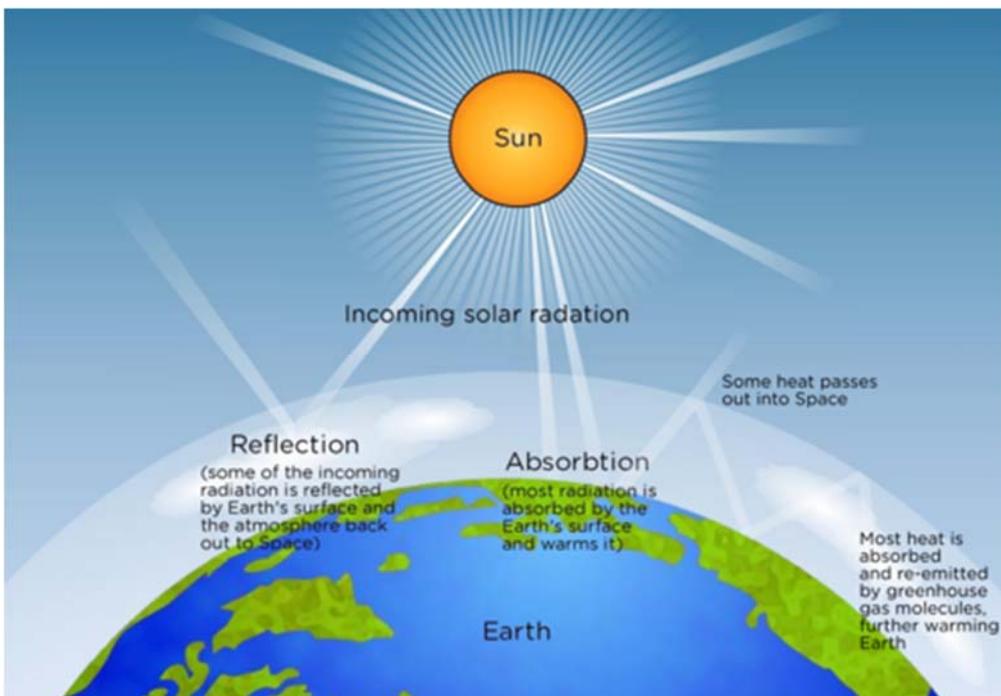

So both natural and human factors change Earth climate. So before humans, changes in climate resulted entirely from natural causes such as changes in Earth orbit, changes in solar activity or volcanic eruptions.

However, since the industrial era began, humans have had an increasing effect on climate, particularly by adding billions of heat-trapping, greenhouse gases to the atmosphere. Most of the observed warming since the 20th century is due to human-caused greenhouse emission.

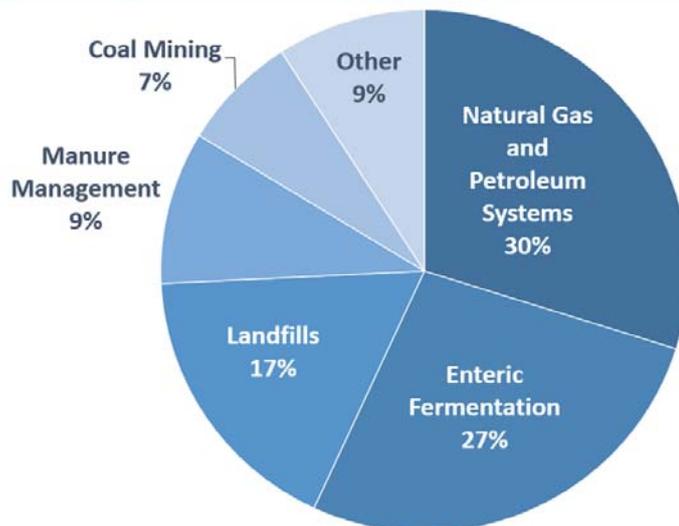

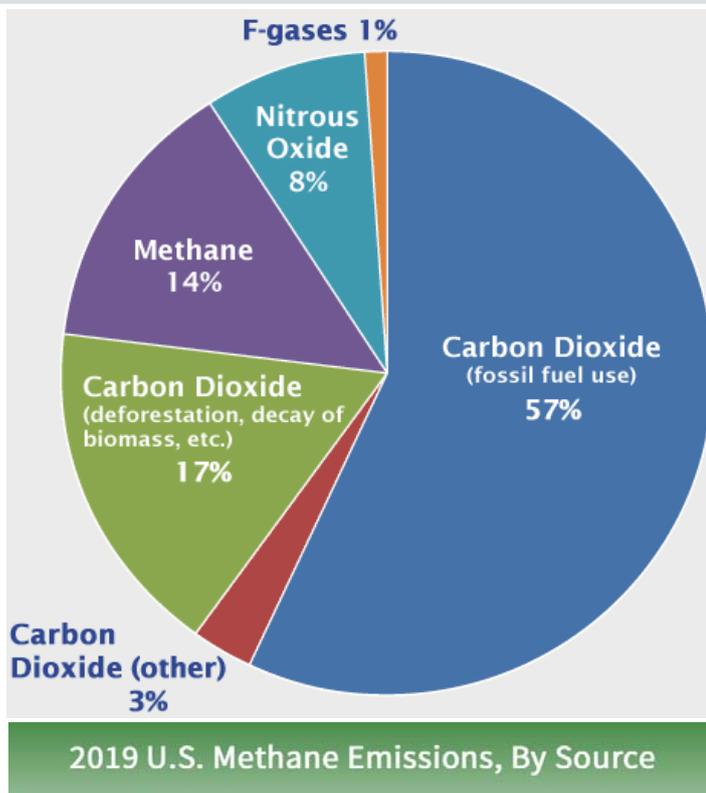

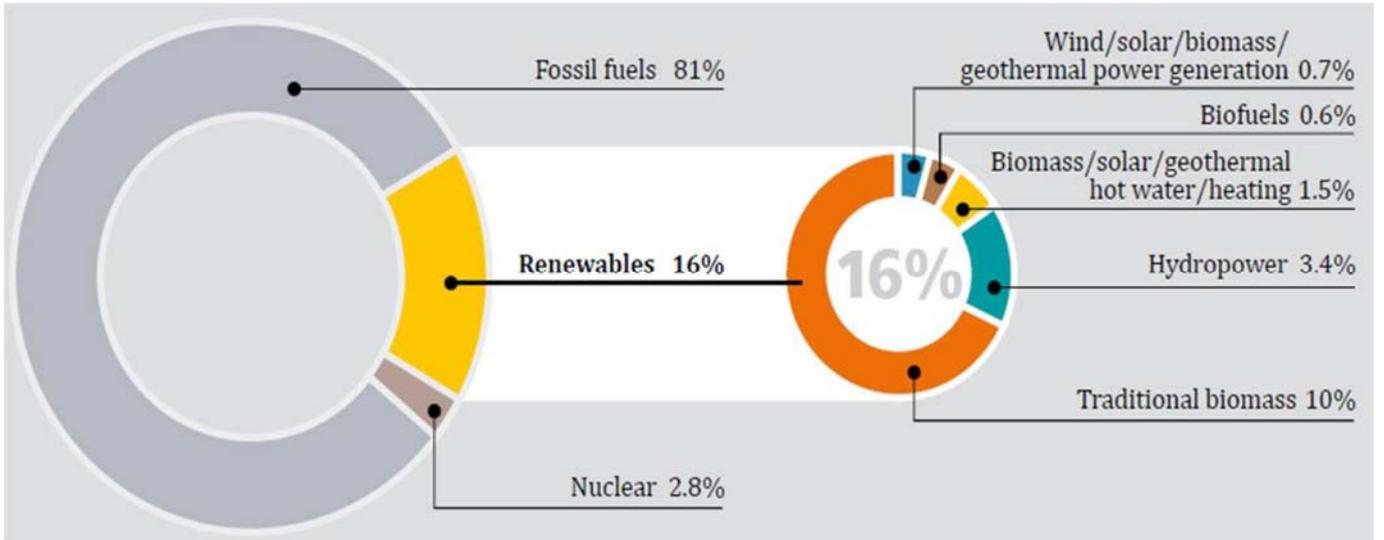

When sunlight reaches Earth's surface, it can either be reflected into space or absorbed by Earth. Once absorbed, the Earth releases some of the energy into the atmosphere as heat (also infrared radiation).

So greenhouse gases (GHGs) like water vapour ( $H_2O$ ), carbon dioxide ( $CO_2$ ) Methane ( $CH_4$ ) absorb energy, slow down or prevent the loss of heat back to space.

Greenhouse gases (GHGs) are gases that trap heat in the atmosphere. They act like blanket, making Earth warmer than it would otherwise be. This process is commonly known as the "greenhouse effect".

U.S. Environmental Protection Agency (2021). Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990-2019

Greenhouse gas emissions from the Australian red meat industry have

**FALLEN 57%**

since 2005<sup>1</sup>.

The Australian red meat industry's contribution to national emissions has

**MORE THAN HALVED**

from 21% in 2005 to 10% in 2017<sup>2</sup>.

Red meat + Manufacturing

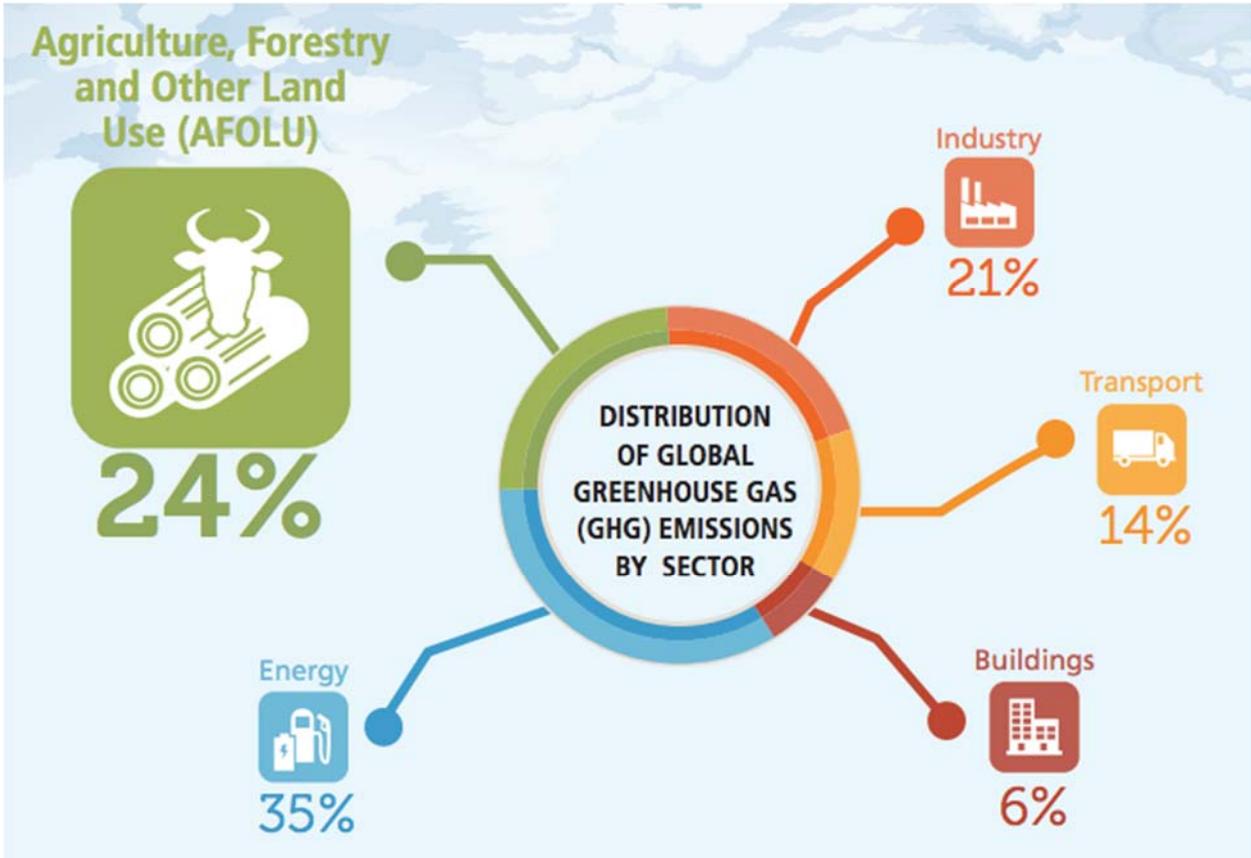

**THE ONLY MAJOR SECTORS** in the Australian economy to **REDUCE EMISSIONS** since 1990, with red meat making by far the greatest reduction<sup>3</sup>.

Red meat producers manage **HALF OF AUSTRALIA'S LAND MASS**

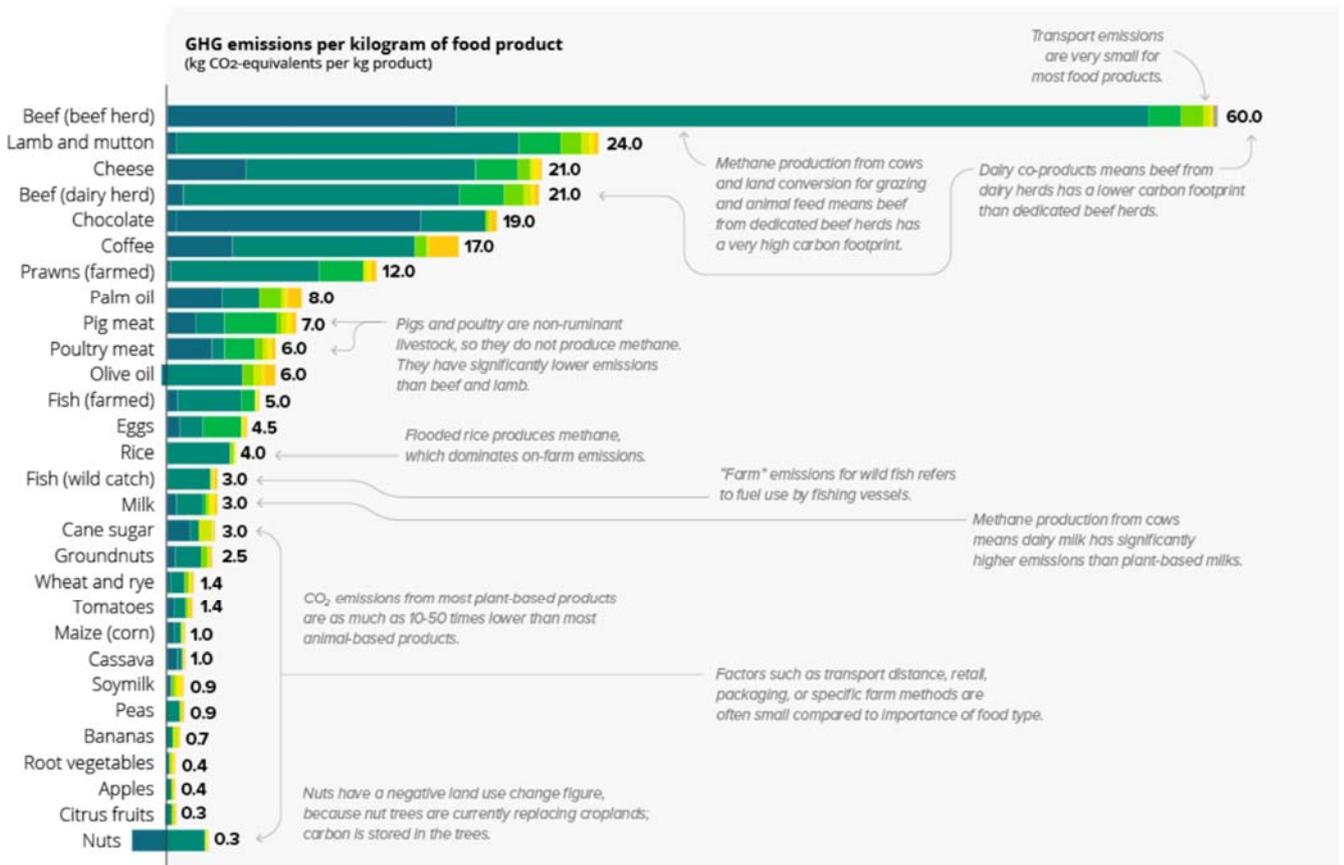

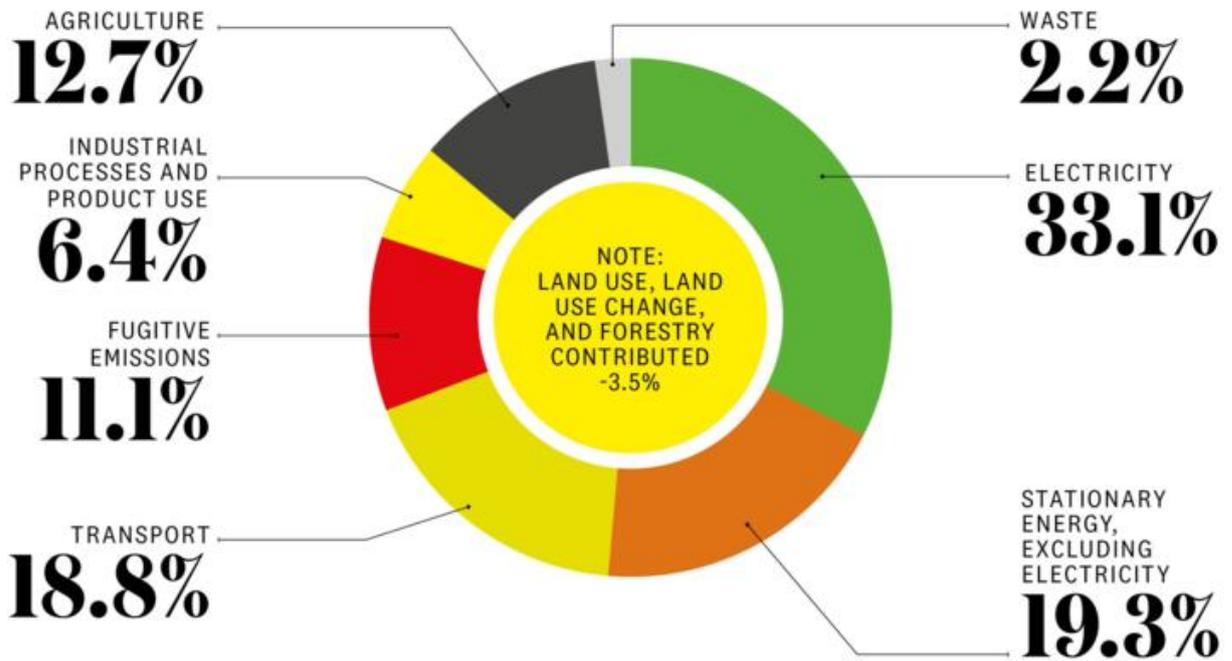

Most of this land isn't suitable for crop production – in fact, < 8% of Australia's land mass is suitable for cropping<sup>4</sup>.

# Why Aussie coal is in such demand

AUSTRALIA EXTRACTS, USES AND EXPORTS TWO TYPES OF COAL: METALLURGICAL, WHICH IS NEEDED FOR THE MANUFACTURE OF STEEL AND OTHER INDUSTRIAL PROCESSES, AND THERMAL, WHICH IS BURNT TO PRODUCE ELECTRICITY.

## metallurgical coal

Australia exported **177 METRIC TONS** of metallurgical coal, worth **\$34.6 BILLION**

## thermal coal

Australia exported **213 METRIC TONS** of thermal coal, worth **\$20.6 BILLION**

2019-20 FIGURES

Australian coal is in demand because of its higher quality - each individual lump of coal has higher energy content within it. A country that burns only Australian coal will have lower greenhouse gas emissions from that activity than another a country that burns exactly the same amount of coal sourced from somewhere else.

**Coal is second only to iron ore as an export earner for Australia.**

In 2018-19 (the last financial year not affected by the pandemic), **coal constituted just under 15 per cent of our total exports**, while iron ore represented 16 per cent and natural gas represented just over 10 per cent.

**By comparison, the largest non-mining export earner for Australia that year was our education sector, which represented 8 per cent of our total export income.**

**BY THE NUMBERS**

**43,956,663 TONNES**  
of CO<sub>2</sub> produced across 20 coal-fired power stations (not including exports, or smelting) in Australia

**\$43bn**  
in exports in 2020, down from \$63 billion in 2019

**54%**  
of Australia's electricity is produced by coal (down from 83 per cent in 1999).  
**Gas is 20%, renewables 24%**

**2800**  
jobs in hydrogen predicted nationally, mostly in regional areas.

**44,400**  
jobs predicted in renewable energy nationally. Including 11,200 in Qld, 15,000 in NSW, 9000 in Vic, 900 in Tas, 3400 in SA and 4700 in WA.

# 400

Australians die each year because of air polluted by bushfire smoke, according to a recent study.

At least one ice-free Arctic summer predicted before 2050.

**Antarctic Sea Ice**  
Most recent IPCC report found 'no significant trend' in Antarctic sea ice.

### EXTREME WEATHER EVENTS IN AUSTRALIA 1900-2019

	DROUGHT	EXTREME TEMPERATURE	FLOOD	STORM	WILDFIRE	TOTAL
Number of events	11	7	64	108	41	231
Individuals affected	7,080,000	4,602,784	325,719	4,154,264	100,638	16,263,405
Deaths	600	509	322	248	533	2212
Total losses (US billions)	\$29.1bn	\$20.5bn	\$38.8bn	\$7.5bn	\$96.1bn	\$192bn

Source: Warwick McKibbin/IMP

Recent years have seen records tumble. 51 degrees in Rajasthan, India, in 2016. 51 degrees in Oman, June 2021. 49.6 degrees in British Columbia, Canada, in June 2021. 18.3 degrees on Antarctica's Trinity Peninsula, February 2020. (Despite the 48.9C scorcher in western Sydney in January 2020, Australia's heat record remains the 50.7 recorded in Oodnadatta, South Australia, in 1960.)

### Droughts

Droughts have become more severe, and are occurring in more places, and these trends are expected to worsen as rain is falling in a different pattern: rain is falling less frequently overall, but the number of heavy precipitation events has increased. Only one region in 45 had seen a decrease: Northern Australia.

### 3

mass bleaching events in the past 5 years

### Great Barrier Reef

The reef has experienced three mass bleaching events in the past five years. A 2020 study showed coral coverage in northern reefs was half what it was in 1988.

V1 - GC8E01Z0JHA

## Glaciers

Most of the world's 200,000 glaciers are shrinking, losing an average total of

# 267

## gigatonnes

of mass per year since 2000. Some Himalayan glaciers that were stable are now showing signs of retreat.

**HOLISTIC APPROACH  
TO ENVIRONMENT**

**BIRD'S EYE VIEW**

# Overarching Strategic Planning

## PEOPLE

Heatwaves kill more Australians than any other natural disaster.<sup>1</sup>

13%

increase in mortality during heat wave<sup>2</sup>

## INFRASTRUCTURE

Of all extreme weather events, heatwaves place the greatest pressure on our city's assets.

\$6.9b

Australia's estimated annual lost productivity due to heat stress<sup>1</sup>

URBAN HEAT IMPACTS

Unusable

public spaces and other facilities become unusable

## ECONOMY

The economic burden of heatwaves is thought to be significant, however, the exact cost remains unknown and challenging to quantify.

100%

higher energy consumption for cooling in West vs East Sydney<sup>3</sup>

## ENVIRONMENT

Extreme heat causes a dramatic reduction in the amenity of an environment from the neighbourhood to the city level.

Recent years have seen records tumble. 51 degrees in Rajasthan, India, in 2016. 51 degrees in Oman, June 2021. 49.6 degrees in British Columbia, Canada, in June 2021. 18.3 degrees on Antarctica's Trinity Peninsula, February 2020. (Despite the 48.9C scorcher in western Sydney in January 2020, Australia's heat record remains the 50.7 recorded in Oodnadatta, South Australia, in 1960.)

**Arctic Sea Ice**  
 Around 2006, Arctic ice covered about 6 million square kilometres in September. Now it's just under 4 million square kilometres.

**At least one ice-free Arctic summer predicted before 2050.**

**Antarctic Sea Ice**  
 Most recent IPCC report found 'no significant trend' in Antarctic sea ice.

# We have deluded ourselves!

## NOT ME.

Deception and misguidance is what we have all been subjected to for thousands of years. Presently, we are being told to look to the sky and observe the greenhouse gas accumulation that we have single handily brought about global warming. Yes, we have contributed, but we need to look to the core of our Earth to realise that a cyclical warming event is also unfolding which our scientists and leaders ignore or deny.

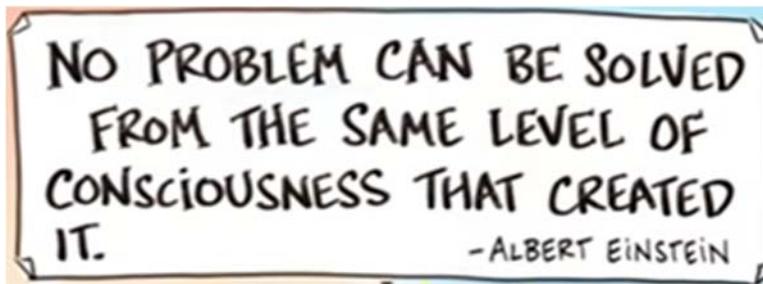

No, it is not up over there, it is down here under our feet.

Nevertheless, our use of fossil fuels is draining a finite source that needs technology development to substitute for it.

Alternative energy substitutes will bring about multiple options. Of a strategic importance is that small communities should become self-sufficient and autonomous from others, though supporting each other.

Our focus upon mega cities is detrimental to our life experience and potential in growth. Cities of one million should spawn off regional cities that are of two hundred thousand in population. Villages of around five thousand should in themselves be strategically independent.

We each consistently try our hardest to avoid our feelings. From the moment we wake up in the morning, every part of our day, is about avoiding our feelings. We use our mind to keep ourselves 'happy'. We are all very unhappy – if we allowed ourselves to feel this, then we would know. We endeavour to achieve 'specific' goals and those goals are all pointless. Consequently, all of our living structures and ways of life are of deception and a distraction to avoid understanding why we are here on planet Earth!

Our environment within which we live is now undergoing major overarching reconstruction:

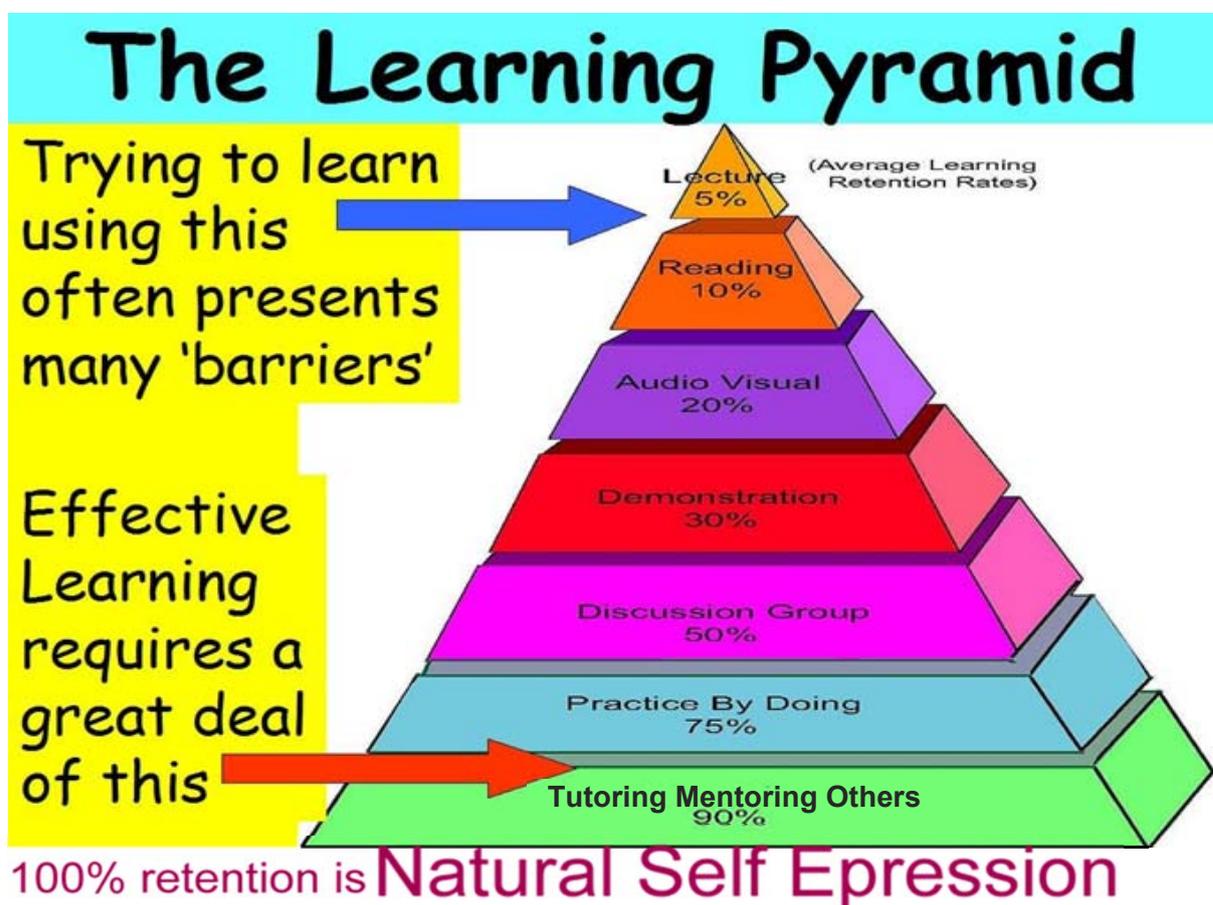

- We are to seek a new way of living. We are no longer being allowed our self-centred, mind-centric way of living. Nothing will remain as it has been. We are to embrace our feelings first.
- Instead of being dependent upon global distribution lines, strategic items of importance need to be sourced locally. As we evolve through our feelings, we will not need addictive distractions!
- A village needs to be able to maintain its independence upon outside supply lines as far as reasonably possible. We are to become personally and deeply interactive with others!
- Independent power supply throughout villages based on renewable platforms involving the likes of solar panels, wind farms, hydrogen generation and storage, solid state batteries, etc. for autonomy.
- Water supply to be managed from natural elements as close as possible to the village / community.
- Local food production is to be enough to maintain the village for extended periods of isolation.
- Education is the fundamental platform of growth of any community and individual. Tutoring of others is to be instilled as routine throughout the community of both children and adults.
- Health services commences with Feeling Healing. Though Feeling Healing does not cure an ailment, it does commence the revealing and release of denied childhood suppression and ongoing repression.
- 'Craft Creations' is to bring about a vibrant home industry platform where locals are encouraged and supported to further develop skills that typically are put aside. We are very capable individuals.
- The larger the community, then the more expansive are the range of strategic industries.
- Long term strategic facilities and industries should be founded between latitudes 28° north and south and at altitudes of several hundred metres.
- Critical supply items that strategically ensure independent continuance of operation multiple facets of industry should be made national projects. Solid state batteries, micro-processors, power generation, communications, and the list would go on, should be overseen on a national basis. Local pharmaceutical / nutraceuticals are one such area of national importance.
- Living is one of experiences and the expression of the feelings that come to surface from such experiences. When we look at how we distract ourselves throughout our day, we will begin to

recognise that we do everything so as to suppress our feelings. The structures of communities and dwellings need to reflect the potential to engage in communication and dialogue with others.

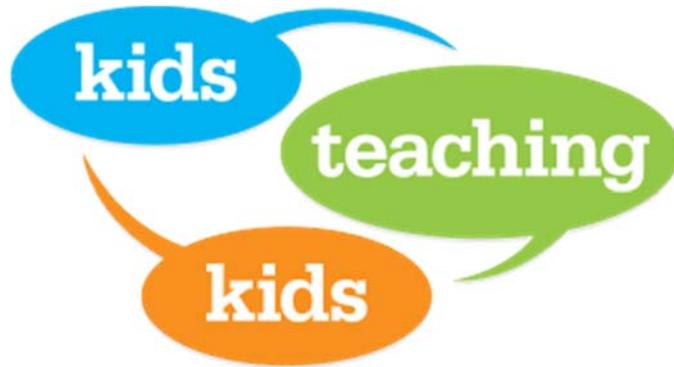

- As the review of strategic industries unfolds, it will become apparent that a region or cluster of nations may need to collaborate to ensure a region is secure in supply of critical elements.
- Nothing is more important than the recognition that our minds are addicted to control of others and the environment, that our mind is addicted to untruth, that the mind cannot discern truth from falsehood, that assumptions are the generation of the mind and that assumption error rate is typically higher than 96%, more likely 98%. It is our feelings that are the source of our truth. Our feelings are soul-based which is always in truth. We are to embrace our feelings and have our mind to follow assisting with what our feelings are guiding us to consider.
- We are to express our feelings, both good and bad, to a companion without restraint. We are to delve down into our childhood repression and express what we feel about our memories of past events, both good and bad. What enters emotionally is to be expressed emotionally.
- At all times, it is the people's will and desire that is to be adhered to, they are to lead these initiatives and they are to identify what they recognise what is best and needed within their communities.

What is unfolding around us is the Great U-Turn. For 200,000 years we have been misguided to live through our minds, to be mind centric. That has been for the benefit of the goals of our hidden controllers. These hidden controllers have now been isolated from us all. As of 31 January 2018, the Universal Contract governing the Rebellion and Default was formally ended.

The disturbances and irrational actions of many that we see all around the world is to encourage us to seek a better way of living, and that is Living Feelings First.

## Economic Sustainable Development Goal EINSTEIN'S THEORY of INSANITY

DOING THE SAME THING  
OVER and OVER and  
EXPECTING DIFFERENT  
RESULTS.

## Economic Sustainable Development Goal

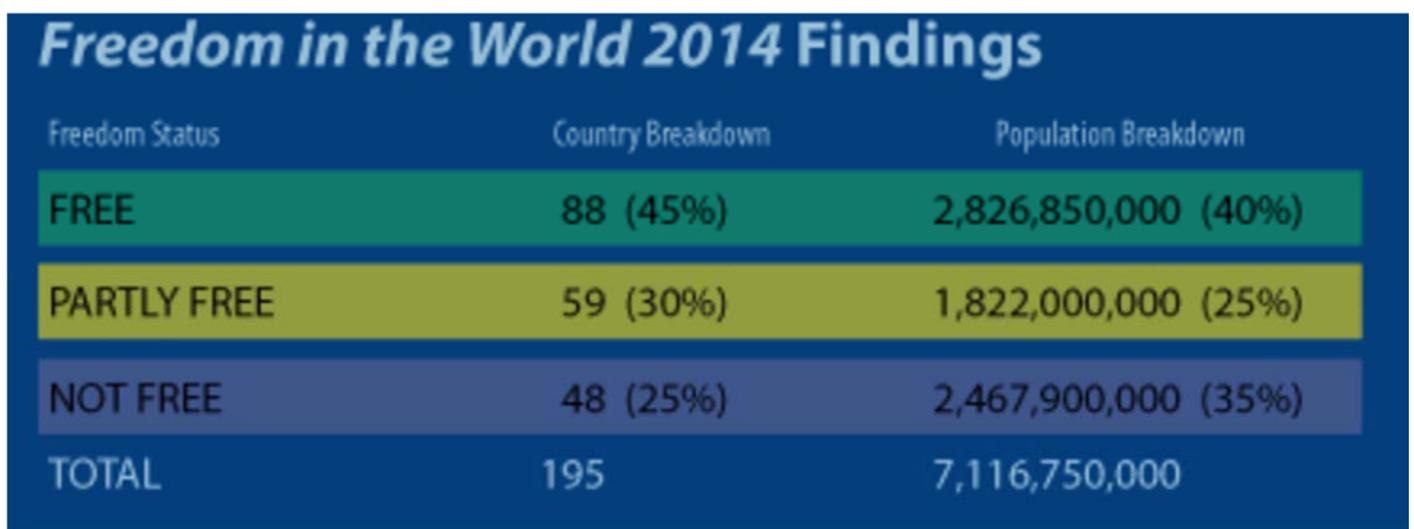

### Points of difference:

- Engage with the community, consult, embrace local leadership and empower ownership from within and by the community.
- Have the development and delivery of the project driven by champions from within the community.
- Ensure long term administration is headed and driven by those from with the community, if not then from within the region or country that is receiving the project(s).
- The people's voice and participation is paramount – they must have acknowledged ownership.
- The people are to have an equal voice amongst themselves. There are to be no party politics and no lines of party factions. All are embraced.
- The people are to choose those most skilled and capable of delivering their projects. The best candidate to represent them is the personality most capable without political persuasions or allegiance.
- Bottom-up democracy is about empowering everyone – all have an equal vote without divisions. Special issues may require interim voting throughout a term of representation.
- Education is the foundation and driver of growth for every individual. Societies do not evolve unless they have the freedom to truth throughout every facet and stage of life.

- The introduction of infrastructure projects into a community, region, or nation requires skills. Such skills to deliver the infrastructure and technologies are to be developed and drawn upon from within the region of the project. Technical educations (TAFE) is to be supported as a project.
- Of importance is ensuring that the technical skills and required equipment remains available within the community to maintain the infrastructure in pristine operational condition.
- Further, that operational skills and equipment are available to assist as needed in times of national disasters.
- Education is the key to the growth of our consciousness. Education commences at the moment of our conception. Education continues throughout our whole life. Education continues for us for eternity!

- As our level of consciousness grows so does every facet of our living and life evolve. The Map of Consciousness (MoC) calibration of countries and their corresponding indexes clearly demonstrates how truth freely made available is the pathway out of Rebellion and Default.

- The Map of Freedom reflects the findings of Freedom in the World 2014, which rates the level of political rights and civil liberties in 195 countries and 14 related and disputed territories during 2013. Based on these ratings, countries are divided into three categories: Free, Partly Free, and Not Free.

- A Free country is one where there is broad scope for open political competition, a climate of respect for civil liberties, significant independent civic life, and independent media. Partly Free countries are characterised by some restrictions on political rights and civil liberties, often in a context of corruption, weak rule of law, ethnic strife, or civil war. A Not Free country is one where basic political rights are absent, and basic civil liberties are widely and systematically denied.  
<http://freedomhouse.org/sites/default/files/MapofFreedom2014.pdf>
- Those countries rated as Free are all those with the highest Map of Consciousness (MoC) calibrations. Those countries rated as Not Free are all those with the lowest MoC calibrations. Those in the Partly Free fall in the middle of these MoC calibrations.
- No community, organisation, society, state or organisation calibrates 500 or above on the Map of Consciousness (MoC). No management team of any corporation, organisation, institution or spiritual structure even calibrates as high as 470 on the MoC! None! (This statement tests TRUE.)
- Yes, we can test every statement as to it being True or False using kinesiology muscle testing.(TRUE)
- By living mind centric, living through our minds and avoiding, ignoring and suppressing our feelings, our soul based feelings which are always in truth, we limit our potential to 499 on Dr David R Hawkins' Map of Consciousness (MoC). By living through our mind to the exclusion of our feelings we are fully embracing the Rebellion and Default as imposed upon Earth's humanity by the rebellious Lanonandek spirits led by the Lucifer soul partner pair. (This statement tests TRUE.)
- Lucifer, with his cohorts, have been so discrete in their imposition of suppression upon Earth's humanity that essentially no one has even realised or recognised that we, on Earth, are in Rebellion and Default, let alone that the suppression of women by the male is to avoid women from being able to expose the folly of not embracing and living through our feelings, this being is the root cause of all that ails societies around the world. (This statement tests TRUE.)
- Education systems around the world are structured to limit the potential of students. Worshipping our mind limits our potential to 499 MoC. That is also the peak level of development for those now living in the first spirit Mansion World.
- The delivery of knowledge through a lecture coming from a teacher at the front of the classroom with the aid of a black or white board is the least efficient format of teaching. Retention rate by students is around 5% of the material conveyed. Yet, the lecture format is universally adopted.
- Students tutoring each other is potentially around 90% successful in retention achievement.

## The Learning Pyramid:

- Natural self-expression is 100% truth as it is your soul based feelings being expressed in communication with fellow students and companions.
- Thus, conversation pits embracing around a dozen students in the self-tutoring process rather than delivering a lecture by a teacher to two dozen students or more in a room is a dynamic development in the learning opportunity.
- Further, by bringing the awareness to students of the benefits and ways of embracing our feelings, our soul based feelings of truth, we are opening the gateway for all to the potential of consciousness development beyond 500 MoC. This is not only a lifelong potential, it is eternal!
- When it becomes understand that all that ails society and each of us is the injuries and suppression that we endured during our early childhood forming years, from conception to the age of six years, then we are opening the pathway to Celestial soul condition which is that of passing beyond 1,000 on the Map of Consciousness (MoC). It is everyone's personal choice whether they embrace their feelings of not. Just being aware of the possibilities leaves the opportunity open to choose at a later time in life. Note: The MoC scale is based on the common log of 10 – 1 point is 10 fold increase!
- What enters us emotionally is to be expressed emotionally. What is held within us each emotionally is the underlying cause of our emotional issues throughout life. It is the underlying construct of our physical life experiences. It is why we seemingly have success in some fields and failures in others. It is why we have financial success or failure. It is why we have positive and constructive loving relationships with some people and negative difficult relationships with others.
- At the moment of conception we are literally 'fire hosed' with the emotional issues of our physical parents. This continues all the way through our gestation in the womb. We are conceived in a perfect condition, both consciously and physically, by the time we are of the age of six years we are reflecting the emotional and consciousness condition of one or the other parent, if not both should they be of a similar emotional and consciousness condition.
- Why many babies in the womb self-abort / miscarry due to the unbearable emotional injuries and errors of belief of its parents. A child born with illness and deformities is the consequence of the parents and carers consciousness condition and emotional injuries conveyed by them upon the child.

**POTENTIAL to BENEFIT your CHILD through your own FEELING HEALING:**

**This steps down each seven years as the child matures**

**From conception to  
age 6 or 7**

**From 8 to age 14**

**From 15 to age 21**

**From 22 to age 28**

**As we heal, we directly heal our children similarly.**

**The Indwelling Spirit arrival for the child around age 6 or 7 starts their independence.**

- As adults fully engage in their personal Feeling Healing of their 'Rebellion and Default', their childhood suppression and ongoing repression / denial of their emotional injuries being mostly from their own childhood experiences, then their own child directly benefit relative to their own age.
- Thus the importance of introducing the understanding of Feeling Healing during schooling and encouraging students (as well as their educators and parents) to be open to embracing their feelings, their soul-based inner truth, then the potential of breaking generational cycles of emotional patterns can start to unfold thus ending the passing on of hereditary injuries, both emotional and physical.
- It is through this understanding and subsequent progressive adoption that the consciousness levels of society can begin to raise. From around the year 300 CE to around the late 1990s, overall calibration of humanity remained at 190 on Dr David R Hawkins' Map of Consciousness (MoC) scale.

# MAP OF CONSCIOUSNESS

*Map of Consciousness* from Dr David R Hawkins, M.D., Ph.D. "Power vs Force".

Level	Log
ENLIGHTENMENT	700-1000
PEACE	600
JOY	540
LOVE	500
REASON	400
ACCEPTANCE	350
WILLINGNESS	310
NEUTRALITY	250
COURAGE	200
PRIDE	175
ANGER	150
DESIRE	125
FEAR	100
GRIEF	75
APATHY	50
GUILT	30
SHAME	20

**PERSONALITY TRAITS:**

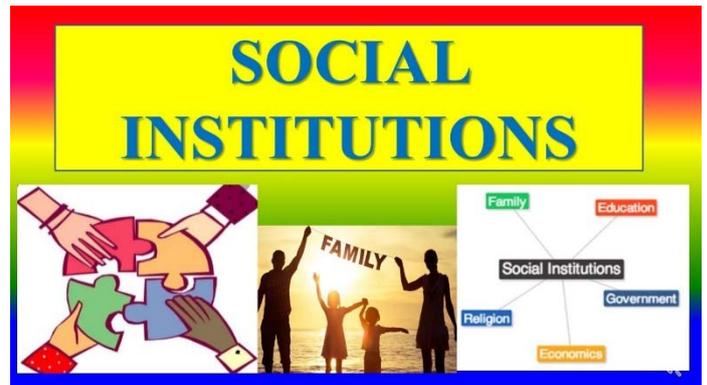

- Less than two dozen people on planet Earth.
- Would not pick up a weapon let alone use it. These people gravitate to the health industry and humanitarian programs.
- Debate and implement resolutions without argument and delay. 470
- Debate and implement resolutions in due course. 440
- Debate and implement resolutions with some degree of follow up generally needed. 410
- Management supervision is generally necessary.
- Politics become the hope for man's salvation.
- Cause no harm to others starts to emerge. Power overrides force. Illness is developed by those man erroneous emotions that calibrate 200 and lower.
- Armies around the world function on pride. Force is now dominant, not power.
- Harm of others prevails, self-interest prevails.
- Totally self-reliant, not God reliant.
- Fear dominates all motivation.
- Suicide is possible and probable.
- At these levels, seriously harming others for even trivial events appears to be justifiable.
- Poverty, unemployment, illness, etc., this is living hell on Earth.

- Three people have realised the way to heal themselves of their personal Rebellion and Default and by 2021, have reached the completion of their Feeling Healing, and with Divine Love are moving close to being of a Celestial Soul Condition. These three people, collectively, have raised the overall calibration of Earth's humanity from 190 to 220 Map of Consciousness (MoC). That is how dynamic our individual healing is upon all of humanity – us.
- As more people embrace Feeling Healing and complete their personal healing, for those who make themselves known and available to the public, may form into a 'Council of Elders' that guide all of humanity (slowly and progressively) out of the Rebellion and Default and into an era of great social development for all of humanity. Should such a group of even twelve people come about and then together, they will essentially be able to guide all of humanity into an era of unquestionable soul development which will be reflected through every aspect of society and how we live.
- Health services are to embrace Feeling Healing.
- Health services, their researchers and professionals are yet to embrace the fact that all our discomforts, pains, diseases and illness stem from childhood suppression and its ongoing repression and denial.
- No medical provider discusses with any of their patients the underlying cause of the issues we are presenting to them. They simply do not know the cause. They are not provided with such information.
- All medical services are aligned to suppress the symptoms. There is no cures being provided throughout any of the health service modalities.
- Universities – their psychology schools – avoid delving into parents' treatment of their children as it is the parents that draw students to the university and pay fees. The universities sell degrees!
- It is now time for intensive research of students of all ages to delve into their childhood suppression and involve their parents to explore their own emotional makeup and in particular how parents treated their children and raised them through their childhood forming years.
- It is also time to explore the time of conception and then gestation through to birth of both parents as well as those close within the family unit. Emotional injury transfer occurs with those close by.
- In short, strenuously delving into root cause of emotional injuries and errors is the only way to reveal what is the underlying cause of any personal issue, be that in business, employment, sport, health and relationships. For children and young people, then it is also time to involve parents and carers to explore their personal issues and how they related and interacted to with that child or young person.
- **To liberate one's real self, one's will, driven by one's soul, moves one to embrace Feeling Healing, so as to clear emotional injuries and errors. With the Divine Love, then one is also Soul Healing. We are to feel our feelings, identify what they are, accept and fully acknowledge that we're feeling them, express them fully, all whilst longing for the truth they are to show us.**
- **What enters emotionally, is to be expressed emotionally.**
- Consider your activities throughout the day. You may begin to notice that everything that we engage in and do is distracting ourselves from our feelings, denying our feelings and emotions. Further, the more we technically 'advance', the more we avoid direct and meaningful communication with those in our environment. While we worship our minds and ignore our feelings we are going further and further away from truth and truth is love. So, our health clinicians give us suppressions for our symptoms so that we can continue on in our stupor and malaise – never addressing the cause!
- All discomforts and illnesses are essentially prompting us to delve into our feelings of suppression, to enable us to resolve issues that are mainly injuries incurred during our childhood forming years, from conception through to age of six years, so that we express what comes to surface and free ourselves of the underlying cause. No illness will be more painful than the relevant childhood injuries. And the

emotional expression will be no more painful than the relevant childhood injury. But the expression will bring about a permanent resolution of the issues now being confronted.

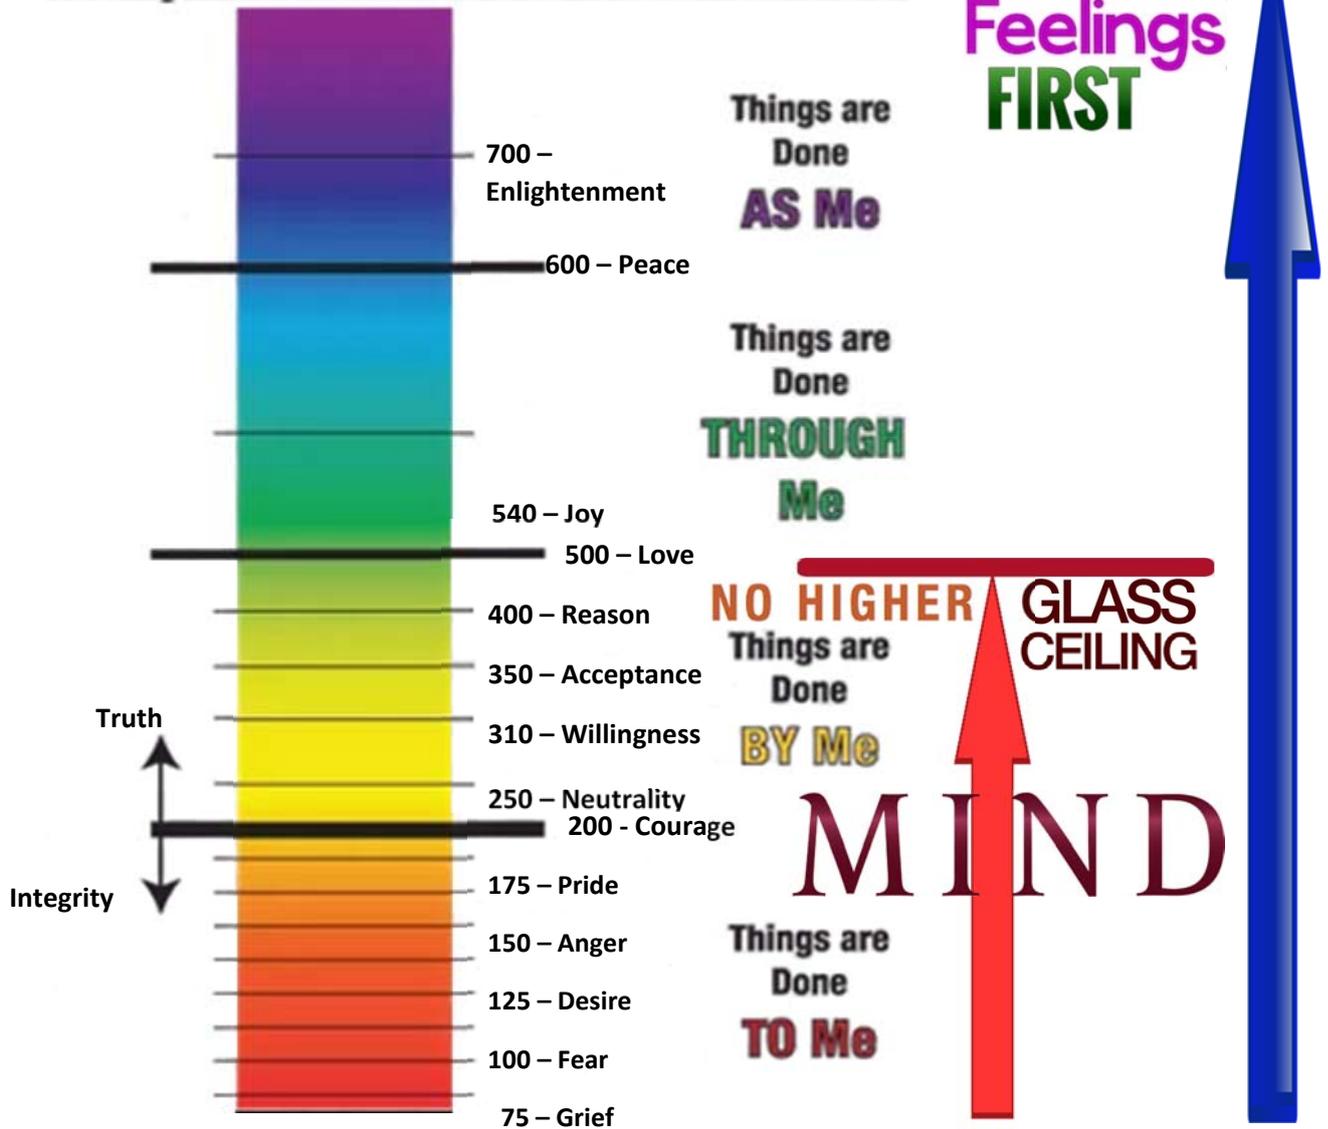

- Individuals who embrace their personal Feeling Healing may find that is very helpful to have a companion to converse with as they progress. Working with someone else, especially of the opposite sex, is very helpful. If you have no one, then talk it out with your Heavenly Mother and Father.
- Individuals may form into small groups and communities. This may result in “Paradise Village” communities were they support each other throughout their Feeling Healing.
- Feeling Healing is a way of living, it is not a cult or a religion. There are no rules, no controlling hierarchy, no special books, no dogmas, creeds or rituals. As a way of living, it is all about your free will and personal desires.
- As Living Feelings First becomes more and more embraced, all institutionalised platforms of society will be thoroughly reviewed and restructured. Nothing that has been established during the Rebellion and Default will remain. All facets of how things are done will be found wanting and be restructured.
- As changes in living conditions and practices unfold, it is the people from within the communities that are to be engaged with, consulted with and support with the implementation of the development and changes they see best for themselves. We are to respect their will and support their wishes and desires.
- Mind centric living has created a humanity functioning in a stupor, living in zombie mode with no spontaneity and intuitiveness. We are now to blossom through living feelings first.
- We are to aspire to live through our feelings and have our minds assist in the implementations.
- The potentials of each and EVERY one of us is unimaginable! Our journey forward is one of incomprehensible wonder. We will each have our day in the sun, so to speak. Everyone’s true potential will unfold as we live Feelings First. This is how we were meant to evolve until the Rebellion and Default was imposed upon us by high level rebellious spirits.
- Those who we see to be very disadvantaged and deprived will unfold to be our equals! Also, we all are blessed with incomprehensible natural intelligence, we are fully self-contained.
- This time, in the history of humanity, is the most exciting time ever experienced.
- Humanity has now commenced the Great U-Turn. For 200,000 years, we have been misled to live mind centric, taking us further and further away from our feelings and away from truth. Now, we are to embrace our feelings and have our minds assist (follow) to do what our feelings prompt us to consider.

## PASCAS SDG

# PASCAS Self Determination Gift

# Map of Consciousness

**Note:** The Map of Consciousness scale is from 1 to 1,000  
 The Map of Consciousness (MoC) table is based on the common log of 10. It is not a numeric table.  
 A calibration increase of 1 point is in fact a 10 fold increase in energy.  
 A calibration increase of 10 points is in fact a 10,000,000,000 fold increase in energy.  
 Thus the energy differentials are in fact enormous!

## To All the Suppressed Kids who are Dealing with the Consequences now as Adults...

The feeling of being rejected, disapproved of and conditionally loved by our primary caregivers – parents – is a monumental, long-lasting burden that we all carry. It produces chronic shame, guilt and anxiety. As a child we are blamed for doing things wrongly and in doing so we perceive ourselves as being bad, inconsequential, and having to embrace a persona that is not our true selves. We abandon our feelings expressiveness and embrace our minds to live life in the world foreign to truth and love. Our parents murder our free expression of our feelings and true personality! There are no exceptions.

## Discomfort, Pain, Illness and Depression.

Verna, a Nature Spirit, 17 April 2020: Nature isn't randomly popping up viruses that might suddenly sweep through affecting humanity 'evilly'. The Rebellion and Default are the true viruses that we are all 'infected' with. Viruses are more of the spirit really, which is why they are so elusive. If our soul needs to give us the experiences of the virus we will 'catch' it. Other disease, like cancer, and the breakdown of the physical structure is again wholly physical however they are the physical manifestations from the breakdown of our spiritual light in our spirit systems.

All illness results from our inner levels of discontentment – BECAUSE WE DON'T FEEL LOVED.

Should every soul, all at the same time, need the experiences from a virus to feel all the feelings we need, then it will be **different feelings for every person**.

Humanity is to uncover the truth of evilness, its wrongness, of its rebellion and default. And illness is to show us that we are wrong. We wouldn't get sick if we were right. ILLNESS IS OUR FRIEND. It's all about what went into us through our forming and early childhood. All the secrets are contained back there within ourself. When we 'go in' we're to go into our early life through our adult 'now' feelings.

Corona, 24 March 2020: "There is no way on earth I (Corona) can possibly be worse than how your parents treated you, it just can't happen, I can only affect you as far and as badly as your parents affected you. I can't create more pain in you than your parents have already created.

"The extent of unloving parenting that you all had to endure as children is now killing you, that is the truth of how bad it was. It is killing you because you refuse to understand what is happening, you refuse to connect to your pain, you still refuse to accept the truth and this is the open door for me (Corona) to enter into you and find a cell for me to live off and mutate and multiply in you. Your denied and suppressed feelings let me in.

"Stop resisting me and work with me in what I want you to know about yourself. I am no greater pain than the pain you felt and denied as a child.

“You fear me killing you, making you feel so bad, yet isn’t this all so familiar, isn’t this how you felt with your parents at times in your life? Isn’t this how they made you feel, only they didn’t allow you to feel it fully, only a tiny portion of the pain they inflicted on you, with the rest you were forced to deny and keep suppressed. And this is what I ‘feed’ on, all your repressed misery and pain. It is your parents you fear, and I am helping you feel that truth.

“Your parents forced you to do their will and gradually your own will got left behind not being considered at all by your parents. And that is how I have to work with you all, and you will all feel me differently depending on the severity of your will denial and suppression.

“You were parented by two of the same Viruses, they are the Virus that is within you right from your conception and took away your will just as I am doing to you now. I am treating you the same way as your parents treated you as children and you refused to see it, so denied it.

“I am reuniting you with the truth of how hurt and unloved you feel because of your unloving childhoods. You all have the power to turn this around and all you have to do is to begin feeling how I am making you feel, accept every feeling, express every feeling and find the truth through your feelings. Do this and I will lose strength and lose the hold I have over you because I no longer have to make you feel so bad to make you feel your feelings. You have the cure within you all and that cure is YOUR FEELINGS!!”  
(These are extracts from Corona speaking through a nature spirit to Samantha.)

The spiritual upliftment so far as the new ‘vibration’ humanity will experience is the new vibe of the next age, and it’s upliftment will only be uplifting those people who chose to do their healing, to submit to their bad feelings and by expressing them to uncover the truth of their evilness – all that resulted from our childhood.

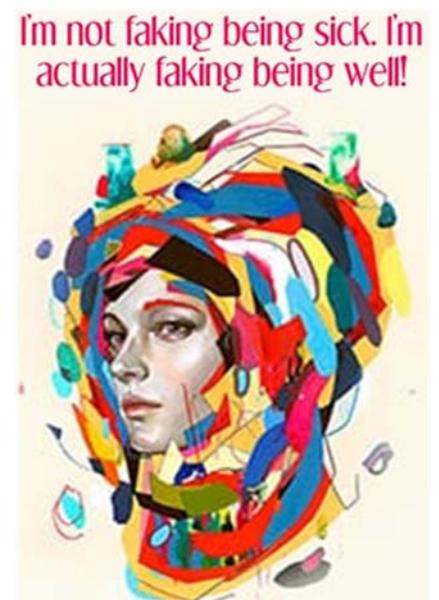

If we all Heal ourselves, being of true and perfect Natural love, then by living in harmony with nature, which we would naturally be doing, such horrendous diseases would not afflict us, because we would not need them to show us that we are disharmonious with nature.

When we are fully Healed, we won’t need to get sick, the Celestial spirits don’t get sick, they don’t have the bad feelings as we do on Earth and in the mind Mansion Worlds, and so we won’t need to have those feelings that would come from an illness, so we won’t get sick.

EVERYTHING that happens to us does so to help us live one of two ways. So we will ‘get a virus’ to help us go further into our truth-denial; or we will get one to help us come out of it.

Our bodies are designed to live anywhere, even in the most infested disease ridden place on the planet, and we will get sick if we need that sickness to further our truth-denial, or we will get sick if we need it to help us heal our truth-denial, or we simply won’t get sick. There is NO OTHER REASON why we get sick!

If we are going to get sick, that will happen either way because we are already sick within ourself and from how we were treated through our childhood – there are no other reasons. We are sick because we are denying the truth of ourself and God. We are all very ill being in the Rebellion and Default. **The Rebellion and Default are the true viruses that we are all ‘infected’ with.**

### VIRUS PATHWAY

A virus emerges and medical science gives it a name. Viruses are introduced by nature spirits under instructions from angels. Man can weaponise a virus, however, nature spirits then control its pathway and destiny.

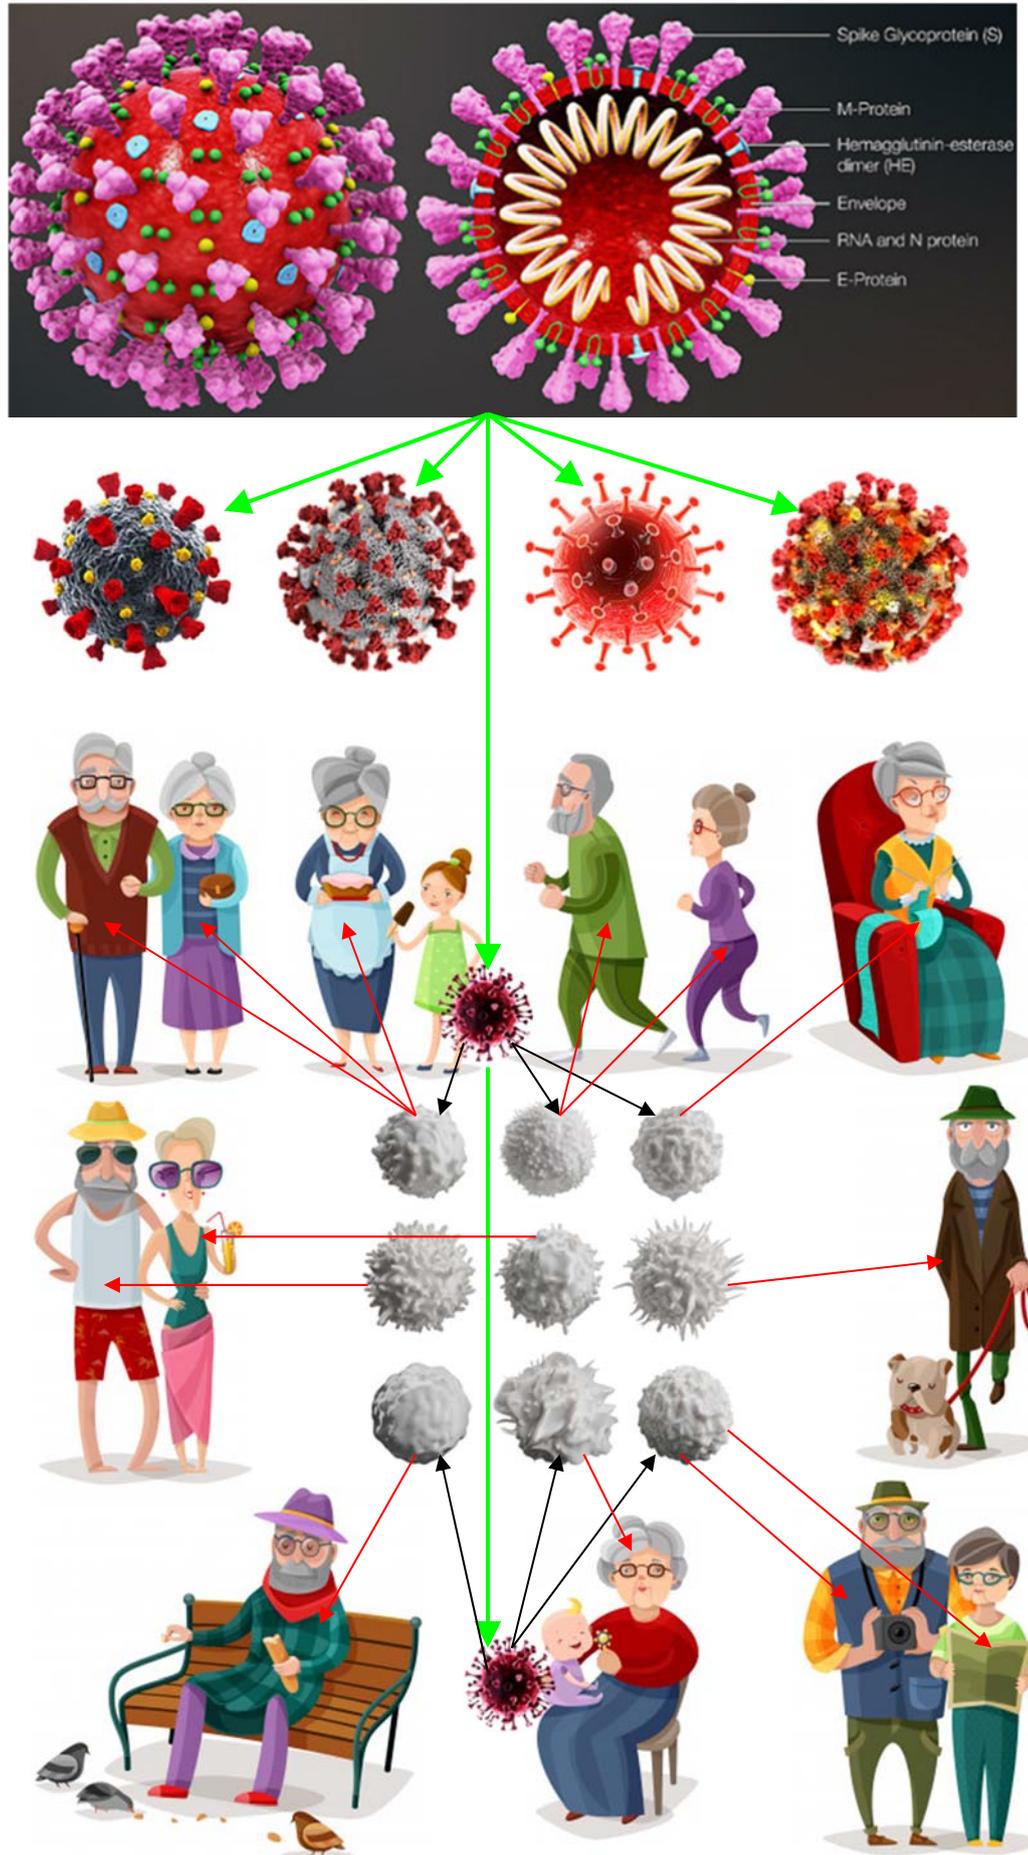

The virus mutates in a manner that scientists can reclassify its developments.

However, every human experience is through a subsequent mutation specifically created to provide the required experience for each individual.

These personalised mutations are not visible to scientists and they are unaware of this facet of a virus. Nor are scientists aware that transmission involves the etheric body of the individual.

Every personal experience involves a person specific virus and this results in everyone's experience being unique from everyone else's.

You experience what your soul requires for you to experience.

**Which is more valuable? A gold coin weighing 1 tonne having a market value of more than US\$65 million (as of November 2021), or a scroll of truth with a similar diameter as the gold coin? This scroll being more than 10 kilometres in length containing the Revelation of ‘The New Way’ for Humanity!**

This 1 tonne gold coin measures 80 centimetres in diameter and is more than 12 centimetres deep.

# Universally Free Education

TO RAISE A CHILD*

# COSMOS – plasma, electric universe

Gareth Samuel: Seeing Precession Differently | Space News

<https://www.youtube.com/watch?v=mdLxP-w1LGg>

**Star takes 550,000 years to complete one orbit around Arcturus, every 25,000 years we complete one rotation around Sirius filament Star being Earth's Sun.**

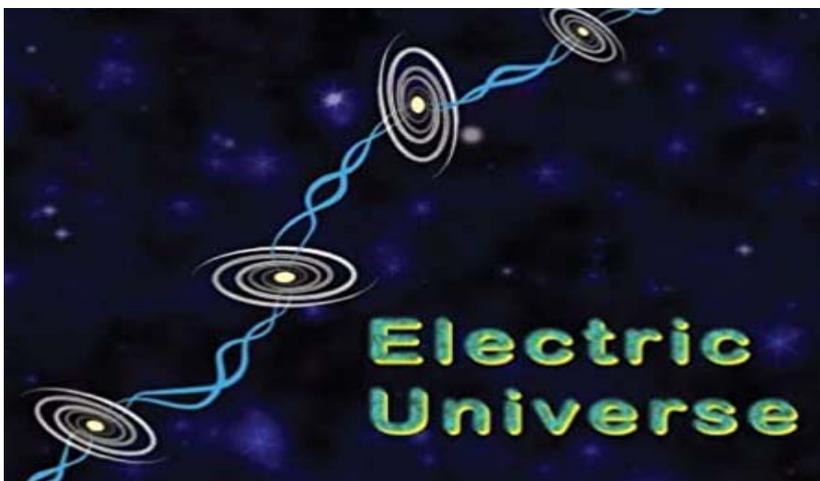

Galaxies are linked by cosmic filaments. These filaments connect galaxies across unfathomable distances which have been found both magnetised and to emit electromagnetic radiation.

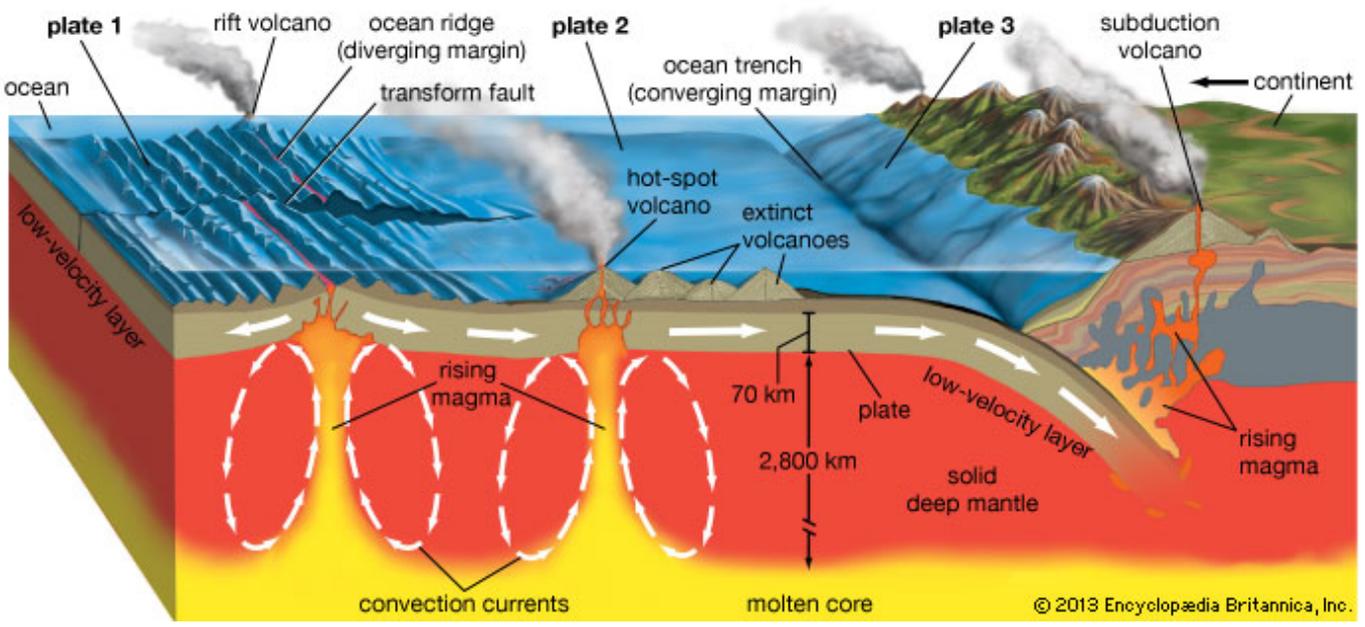

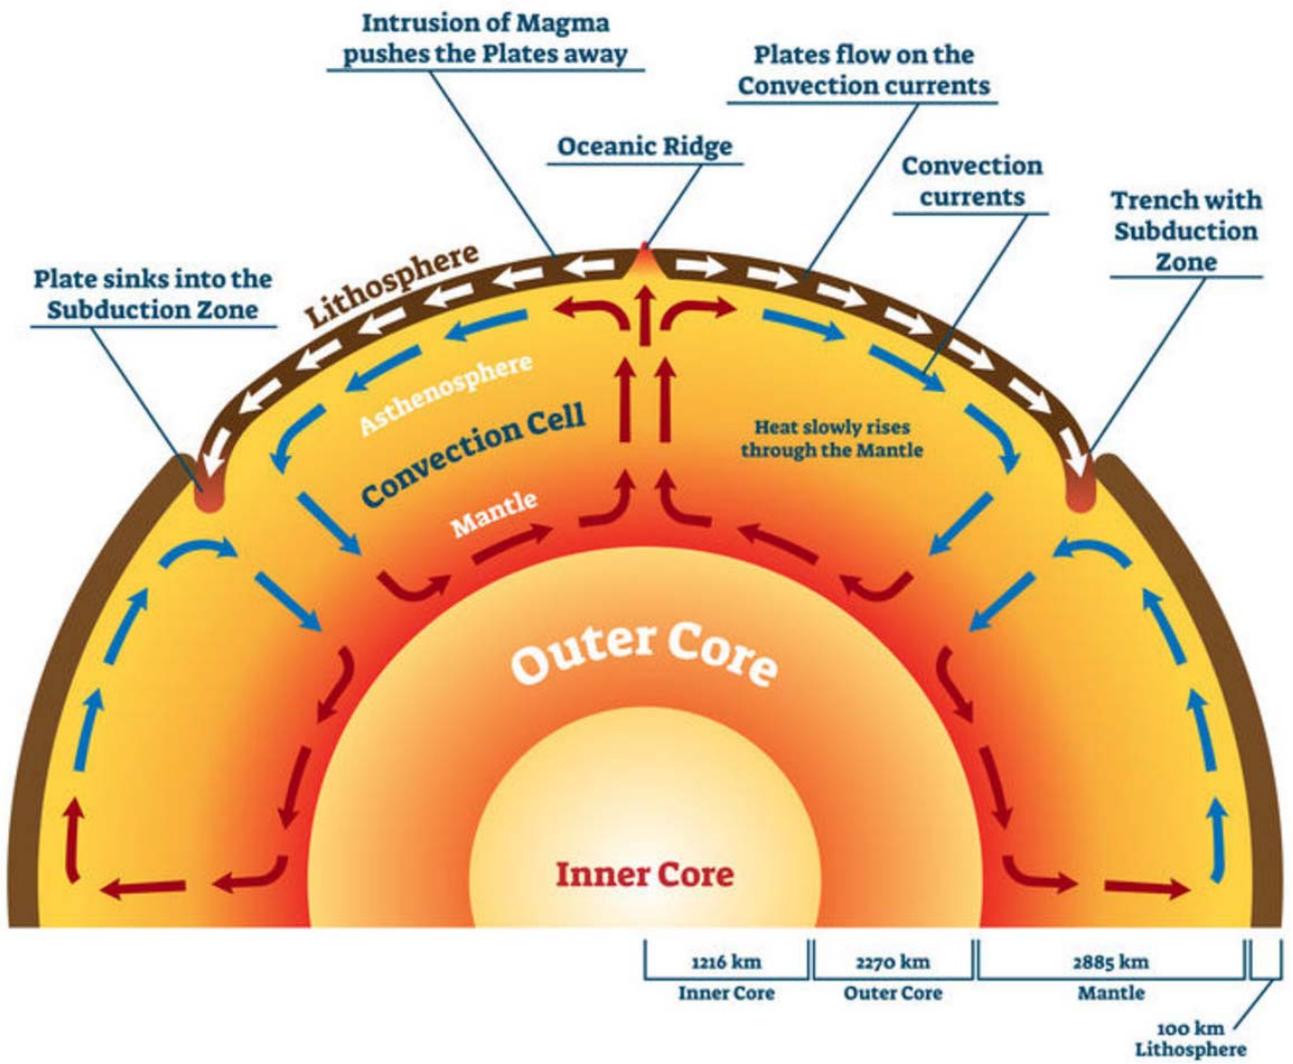

Vast networks of filaments that connect electrical objects across all scales of the cosmos. It is from these filamentary networks that stars are formed eventually making up the Catherine wheel galaxies. Giant plasma filaments connect super clusters across vast distances.

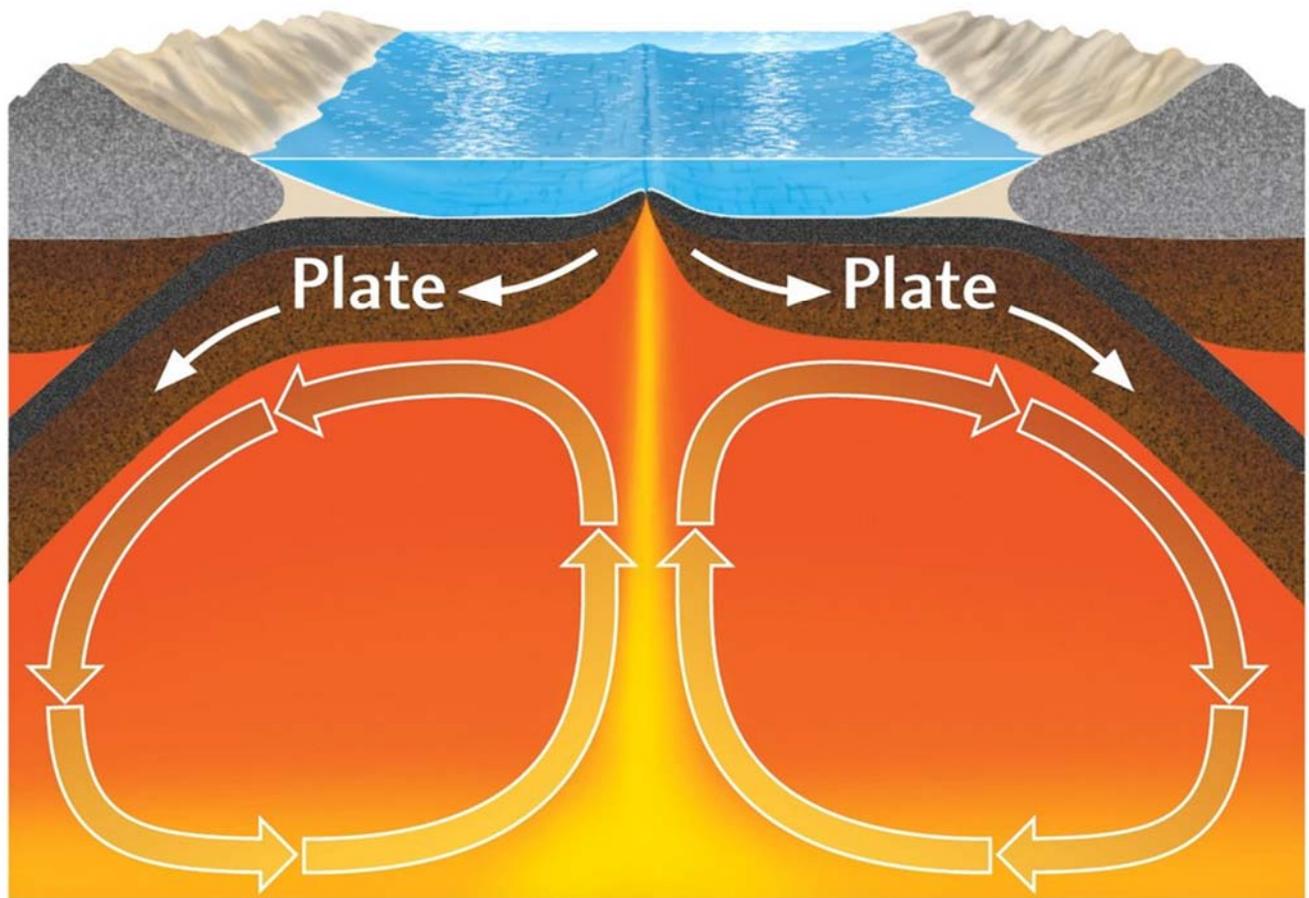

It is these twisted filaments that form like DNA helical strands that celestial bodies are connected and their pathways defined.

Twisted filament pairs have their equivalent celestial bodies. Earth's Sun has Sirius. They rotate around each other requiring a 25,000 year cycle. During such cycles there are two disruptive events that bring about very significant disturbances to the Sun and its planets. The last 'pole-shift' event was extreme, the interim and next event is anticipated to be milder – whatever that is!

# CONVECTION CURRENTS

The core of the Earth can be likened to the beaters in a kitchen mixing bowl. As it rotates, it moves lava up and outwards. However, unlike the beaters in the mixing bowl, the core does not move about creating a uniform distribution of mixing. The constant action creates concentrated heat and as the rotation spreads out away from the source of the extremes of heat, you can have a cooling affect.

Further, the majority of volcanic and earthquake activity is under the oceans. This is even more so as the Earth's crust is thinnest under the oceans.

The oceanic plates are expanding. Thus, island nations may find themselves gently sinking due to this expansion and further finning.

As the rotation of the core has slightly increased due to the influx of energy from the Sun to the antennae like receptors at the core, the temperature of the core has also increased in recent decades thus warning the oceans and the continents.

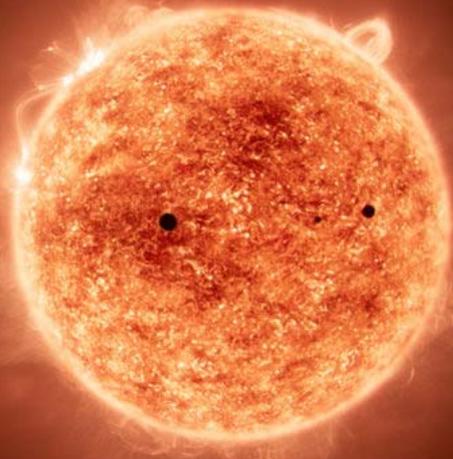

As this activity may continue to grow, then volcanic and earthquake activity is likely to continue to grow where the plates press against each other.

Much of the global earth changes that are unfolding, if not the significant majority, are being driven by the increased activity of the core of Earth.

Many communities, both those on islands as well as low lying coastal regions may need to relocate. They are to be engaged with to determine from them how they best see their required assistance be shaped and provided.

There is more to unfold!

# SunNova

Douglas Voigt: At the time of the geomagnetic reversal (polar reversal), the side of the Earth facing the Sun will get the full impact of the nova, heat and cosmic rays showered on it. Exactly on the other side of the Earth, they get the instant ice age. The ice age happens because of Boyles Law. The expanding atmosphere cause the temperature to drop fast to over 200+ F degrees below zero.

The Sun nova event involves the Sun shedding its dust shield, thus showering the side of Earth facing the Sun with tektites. It may a decade or more for the Sun to rebuild its dust shield before it starts again to radiate heat

out into its solar system and upon Earth.

These Sun nova events are cyclical, they appear to occur between 12,000 and 13,000 years.

The stages leading up to such an event are not presently understood. We are, in 2021, experiencing a warming event on Earth, coming out of a cool phase. Over recent decades the Sun has received energy inflows that it has then radiated out to its planets throughout the solar system. The core of Earth acts like an antennae, absorbing the energy which it has used to slightly increase the rotation of the core thus causing increased tensions on the surface of Earth, increasing surface temperatures of continents as well as ocean temperatures, to increase. The oceanic plates are expanding a little, thus thinning, and we have increases in earthquake and volcanic activity, much of it under the oceans.

Man is contributing to the environmental issues but nothing like that resulting from the Earth's core activity coming about from energy flows through the universe to the Sun and then to Earth and its neighbouring planets.

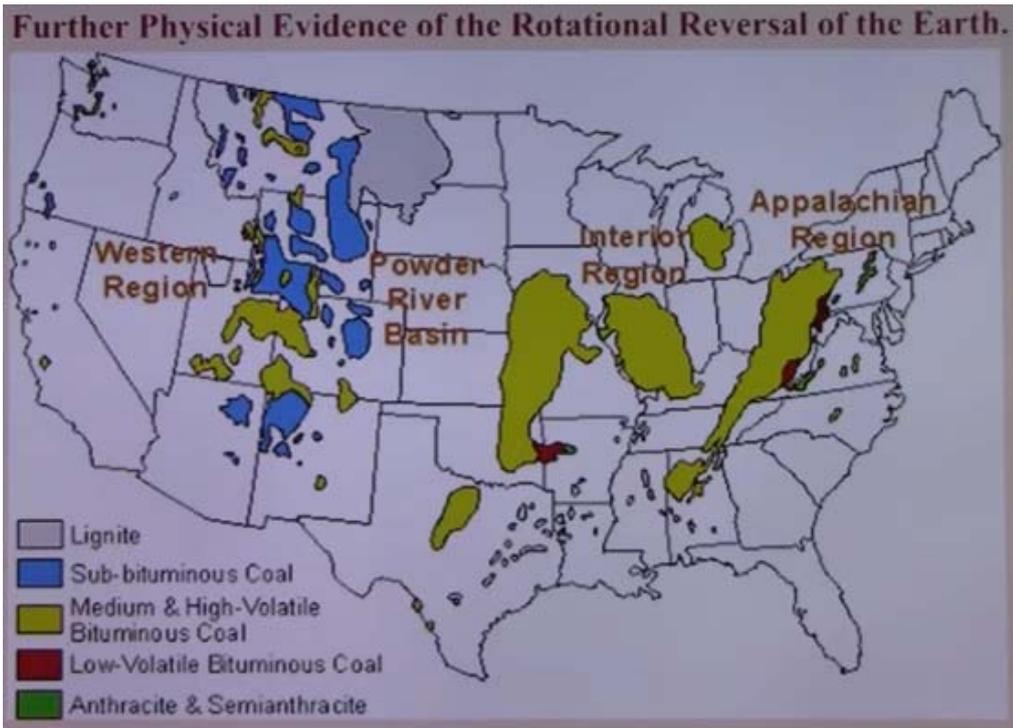

Leading up to a polar reversal, the rotation of Earth begins to slow, however, the final slowing of the spin of the Earth is rapid before it final stops, to sit still for some hours and then begin its rotation in the opposite direction. Thus, the oceans inundate the coastlines, in this case they will be doing so on the western coasts. The more open those coastlines are to the oceans then the greater the impact. When the reversed rotation begins then there will be a backwash effect, however as a great deal of water is then in the atmosphere, the impact will be less.

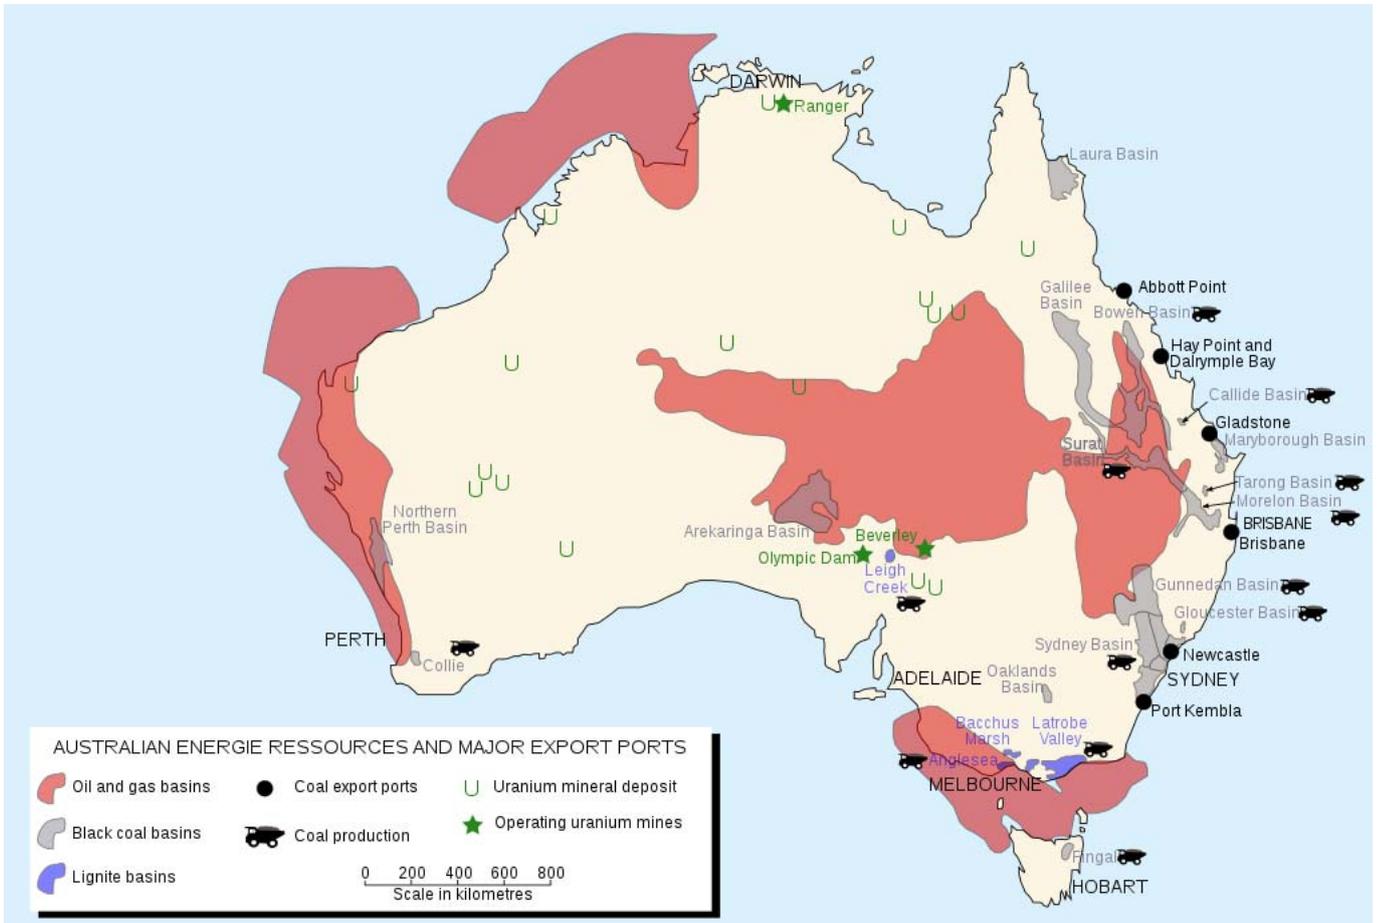

The Sun nova event, due to the rapid escalation of heat on the side of Earth facing the Sun, sees a massive evaporation of water into the atmosphere, thus lowering sea levels significantly.

It is anticipated that the next Sun nova event will be ‘mild’ in relative terms to the last one.

Wave inundation from the Pacific stripped the forest through to the Appalachian Region before dumping creating instantly the coal deposits as outlined below. When the Earth is rotating in the opposite direction, the stripping commences from the Atlantic before dumping in the Western Region. The massive heat from the Sun novoring commences the burning of the stockpiled forests in times of high vegetation with ongoing flooding from the oceans dumping an overburden on the stockpiled burning forests to create the coal deposits. This is essentially an instantaneous event.

The Australian coal deposits formed in the similar manner. The wave inundation from the Indian Ocean transferred the forests from across the country to stockpile up against the mountainous range of the Great Dividing Range.

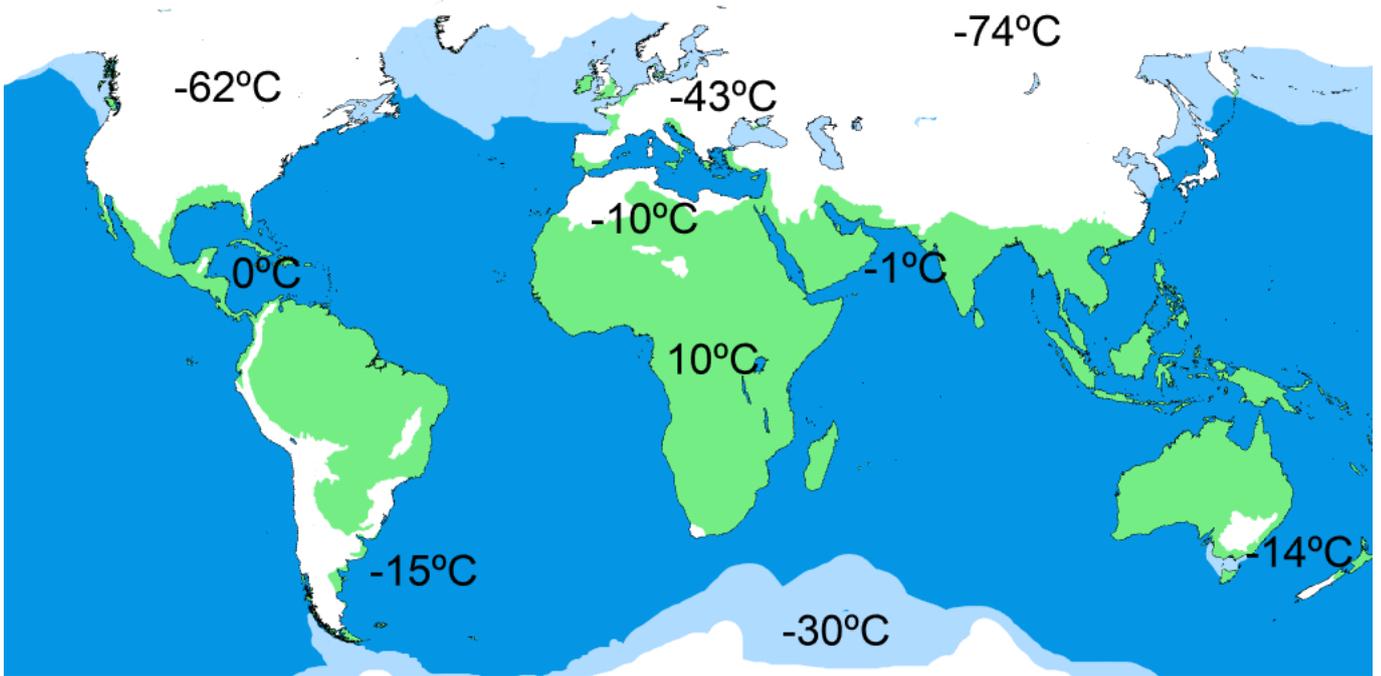

### Further Physical Evidence of the Rotational Reversal of the Earth.

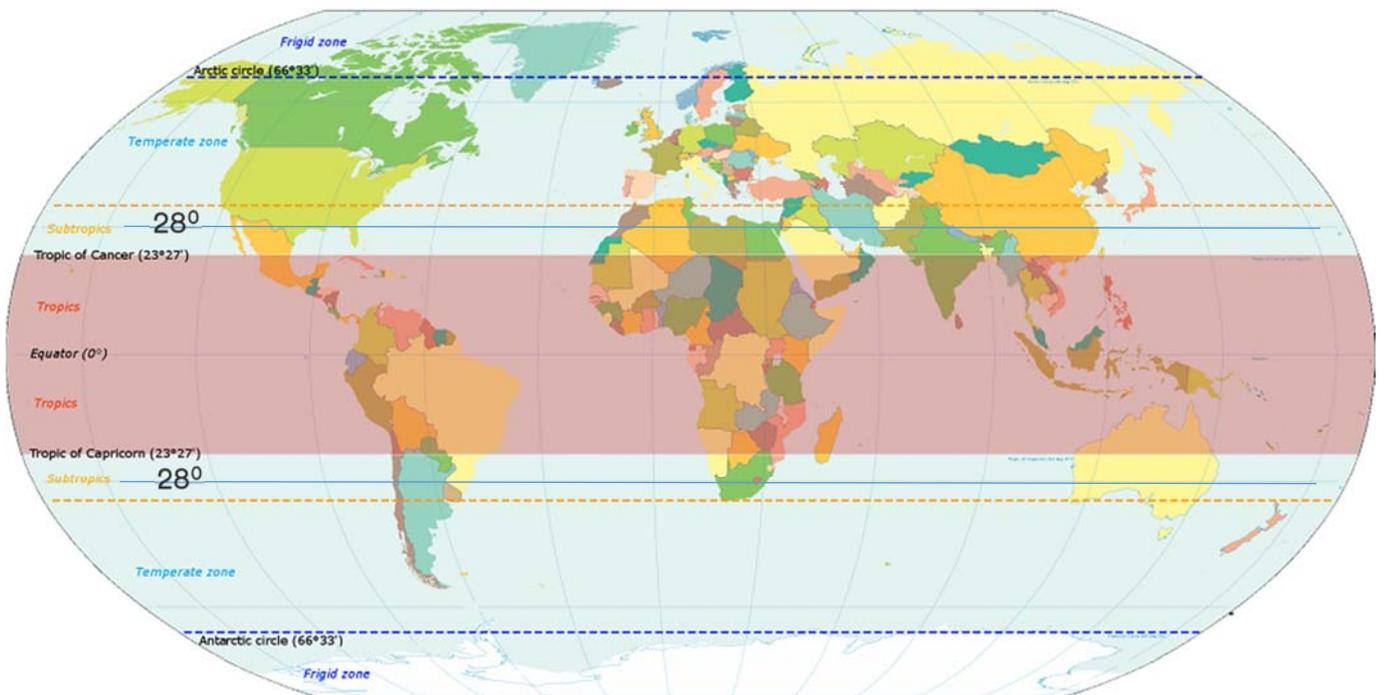

Powder River Basin, Wyoming. Some seams are 200-feet thick. That represents 2,000-feet of organic material deposited at one time.

### "Mini" ice age prediction / expectation:

Consider locations at several hundred metre elevations towards the eastern seaboard between 28° north and south latitudes, and away from volcanic and earthquake zones. Locations focused upon should then be made secure in the supply and access to critical survival items in times of all kinds of crises.

Communities need to consider collaboration between themselves to lessen hardship in times of need. However, it is time for humanity to re-engage with each other in meaningful communications.

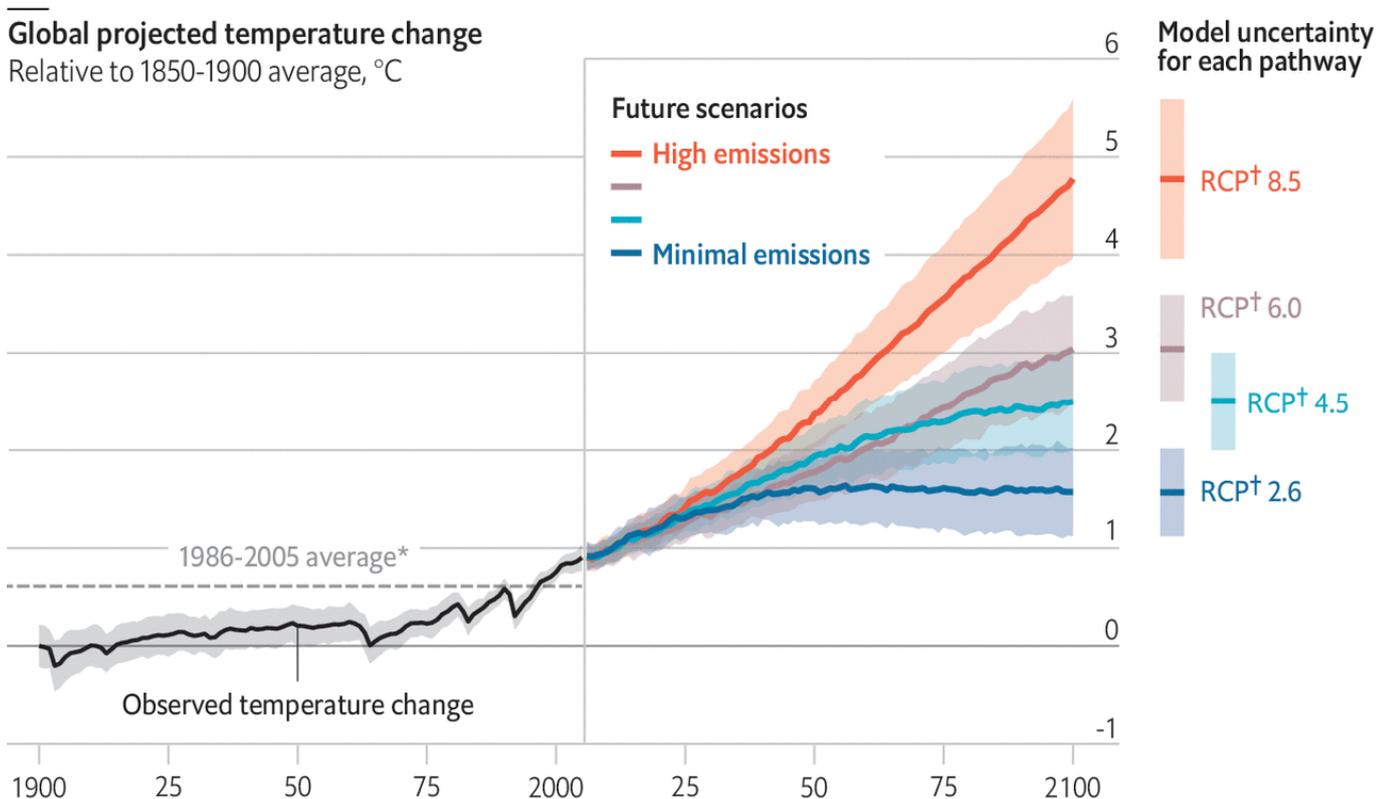

# On the economic geography of climate change

<https://voxeu.org/article/economic-geography-climate-change>

11 October 2021

The planet is likely to be at least 3°C warmer in 2100 than at the time of writing even if immediate and radical action is undertaken (Tollefson 2020). Climate change is thus a defining challenge of our times (the loss of biodiversity is just as pressing). The scenarios issued by the Intergovernmental Panel on Climate Change (IPCC) provide sophisticated modelling of the complex interactions between human activity and climate.

## → Climate models can guide policy even if they are not precise

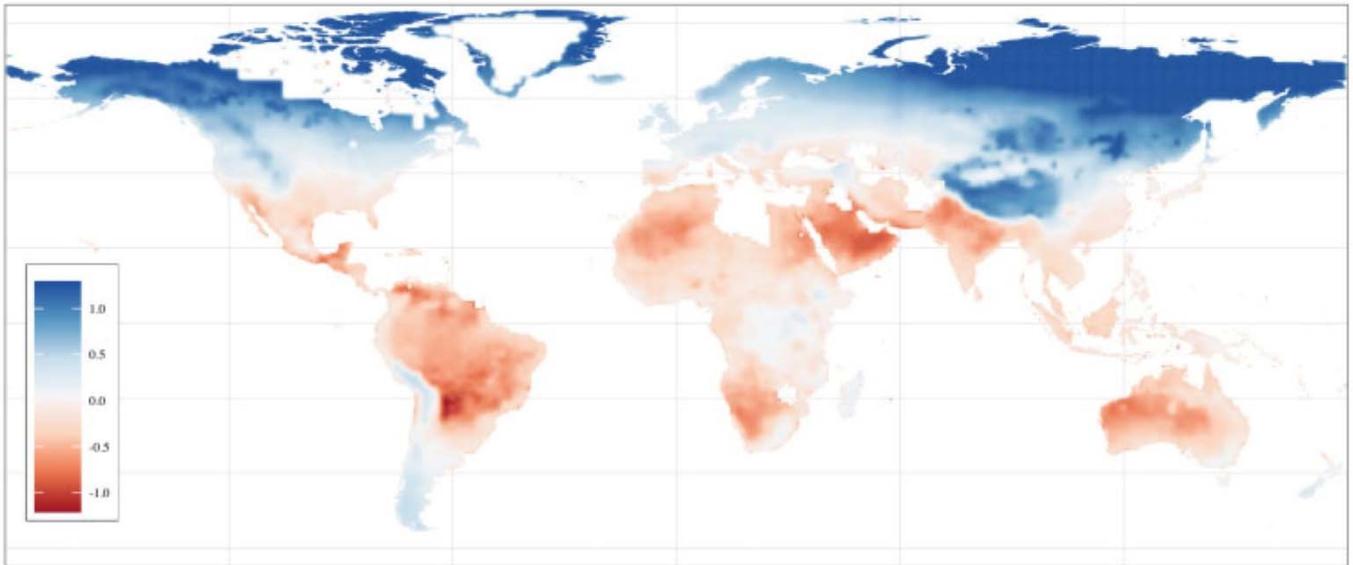

Source: IPCC AR5, adjusted to an 1850-1900 baseline \*Uncertainties calibrated to 1986-2005, as shown †Representative Concentration Pathway

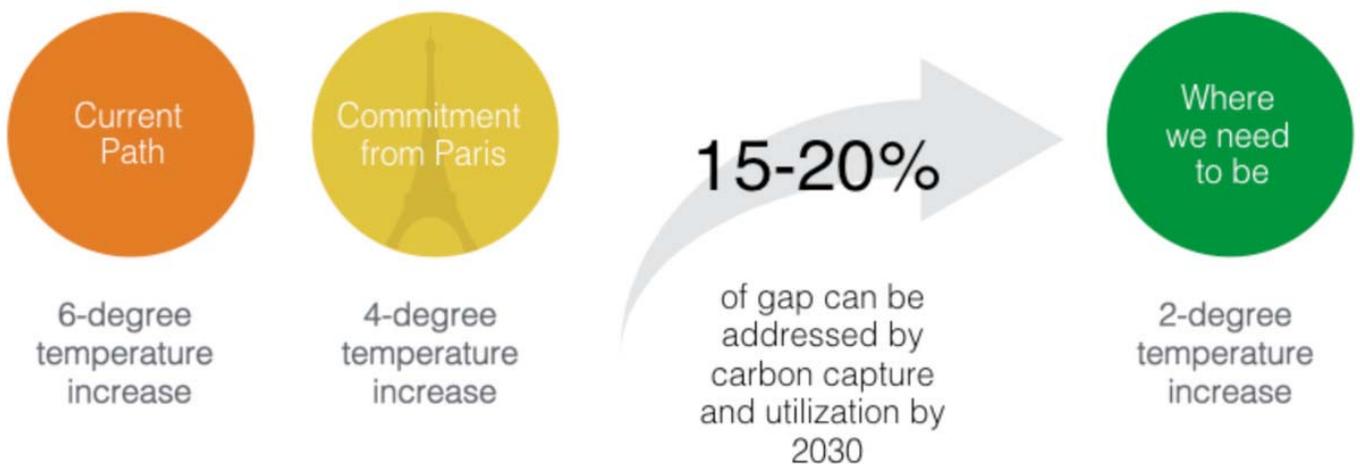

The Economist

The initial scenario in Conte et al. (2021a) assumes that frictions to the mobility of populations and of goods are constant over time. Their model predicts that Scandinavia, Finland, Siberia, and northern Canada gain populations and see increases in income per capita, while North Africa, the Arabian peninsula, northern India, Brazil, and Central America lose on both counts. Figure below reports the effect of climate change on predicted population in 2200. Agriculture becomes spatially more concentrated and shifts towards Central Asia, China, and Canada.

### Effect of climate change on predicted population in 2200 (log differences)

*Notes:* The figure displays the logarithm of predicted 2200 population relative to predicted population under no climate change. Regions in dark blue are predicted to more than double their population; regions in dark red are predicted to lose more than half of their population.

**So-called net zero emissions = potentially zero effect on the temperature.  
Cyclical warming from within the core of the planet is the main driver.**

## **COP26 Glasgow from 1-12 November 2021 - Conference of the Parties**

The global climate summit wrapping up in Glasgow is known as COP26, with COP standing for **Conference of the Parties**. In diplomatic parlance, “the parties” refers to the 197 nations that agreed to a new environmental pact, the United Nations Framework Convention on Climate Change, at a meeting in 1992

The UN COP26 climate change conference has accepted a revised deal which is the most ambitious climate pact since Paris 2015

Scientists say that to go beyond a rise of 1.5°C would unleash extreme sea level rises and catastrophes including crippling droughts, storms and fires far worse than those the world has already suffered.

But national pledges made so far to cut greenhouse emissions — mostly carbon dioxide from burning coal, oil and gas — **would only cap the average global temperature rise at 2.4°C.**

The Paris Rulebook, the guidelines for how the Paris Agreement is delivered, was also completed today (13 November 2021) after six years of discussions. This will allow for the full delivery of the landmark accord, after agreement on a transparency process which will hold countries to account as they deliver on their targets. This includes Article 6, which establishes a robust framework for countries to exchange carbon credits through the UNFCCC.

And for the first time, heeding calls from civil society and countries most vulnerable to climate impacts, the COP agreed action on phasing down fossil fuels (focus upon coal).

COP decisions went further than ever before in recognising and addressing loss and damage from the existing impacts of climate change.

There were also commitments to significantly increase financial support through the Adaptation Fund as developed countries were urged to double their support to developing countries by 2025.

The final COP26 text follows two years of intense diplomacy and campaigning undertaken by the UK Presidency to raise ambition and secure action from almost 200 countries.

Work focussed on driving short term reduction of emissions to limit temperature rises to 1.5°C, mobilising both public and private finance, and supporting communities to adapt to climate impacts.

When the UK took on the COP26 mantle, in partnership with Italy, nearly two years ago, only 30% of the world was covered by net zero targets. This figure is now at around 90%. Over the same period, 154 Parties have submitted new national targets, representing 80% of global emissions.

The UK Presidency has also been focused on driving action to deliver emissions reductions. We have seen a huge shift in coal, with many more countries committing to phase out unabated coal power and ending international coal financing.

Alongside this, we have seen a marked commitment to protect precious natural habitats, with 90% of the world’s forests covered by a pledge from 130 countries to end deforestation by 2030.

While on the world’s roads, the transition to zero emissions vehicles is gathering pace, with some of the largest car manufacturers working together to make all new car sales zero emission by 2040 and by 2035 in leading markets. Countries and cities are following suit with ambitious petrol and diesel car phase-out dates.

# Introduction to Plasma Technology in Agriculture

[https://pl.kfwiki.org/wiki/Introduction\\_to\\_Plasma\\_Technology\\_in\\_Agriculture](https://pl.kfwiki.org/wiki/Introduction_to_Plasma_Technology_in_Agriculture)

Plasma technology was developed by the Iranian nuclear engineer, Mehran Tavakoli Keshe. It is basically a spaceship technology but has many uses and applications in diverse scientific disciplines and professions. In agriculture, plasma technology is increasingly transforming people's understanding of plants and soils, and their diverse magnetic and gravitational fields' interactions with their environments. With this new understanding, plasma scientists and agricultural practitioners are, in turn, revitalizing agricultural development, research, and education and practice across the world. The new plasma technology has potential to completely revolutionize agricultural practices, enhance environmental health and healthy living for both producers and consumers, and virtually eliminate external inputs in agricultural systems across the world. Plasma technology in agriculture adheres to the ethos and standards of conduct as set by Mehran Tavakoli Keshe and the Keshe Foundation.

## Gasses in Nano State (GANS)

With full understanding of how plants absorb carbon dioxide from the atmosphere, Mehran Tavakoli Keshe designed a technology that replicates a plant's leaf for the effective capture of CO<sub>2</sub> and other gases in their Nano states (GANS). A gas in Nano state is a new state of matter, where a gas molecule that becomes Nano of itself appears as a solid state of matter (Keshe, MT, 2011. The Structure of Light). It is especially this seemingly simple GANS capture technology that will completely transform global agricultural development and practice once and for all.

## Transforming agriculture with CO<sub>2</sub> GANS

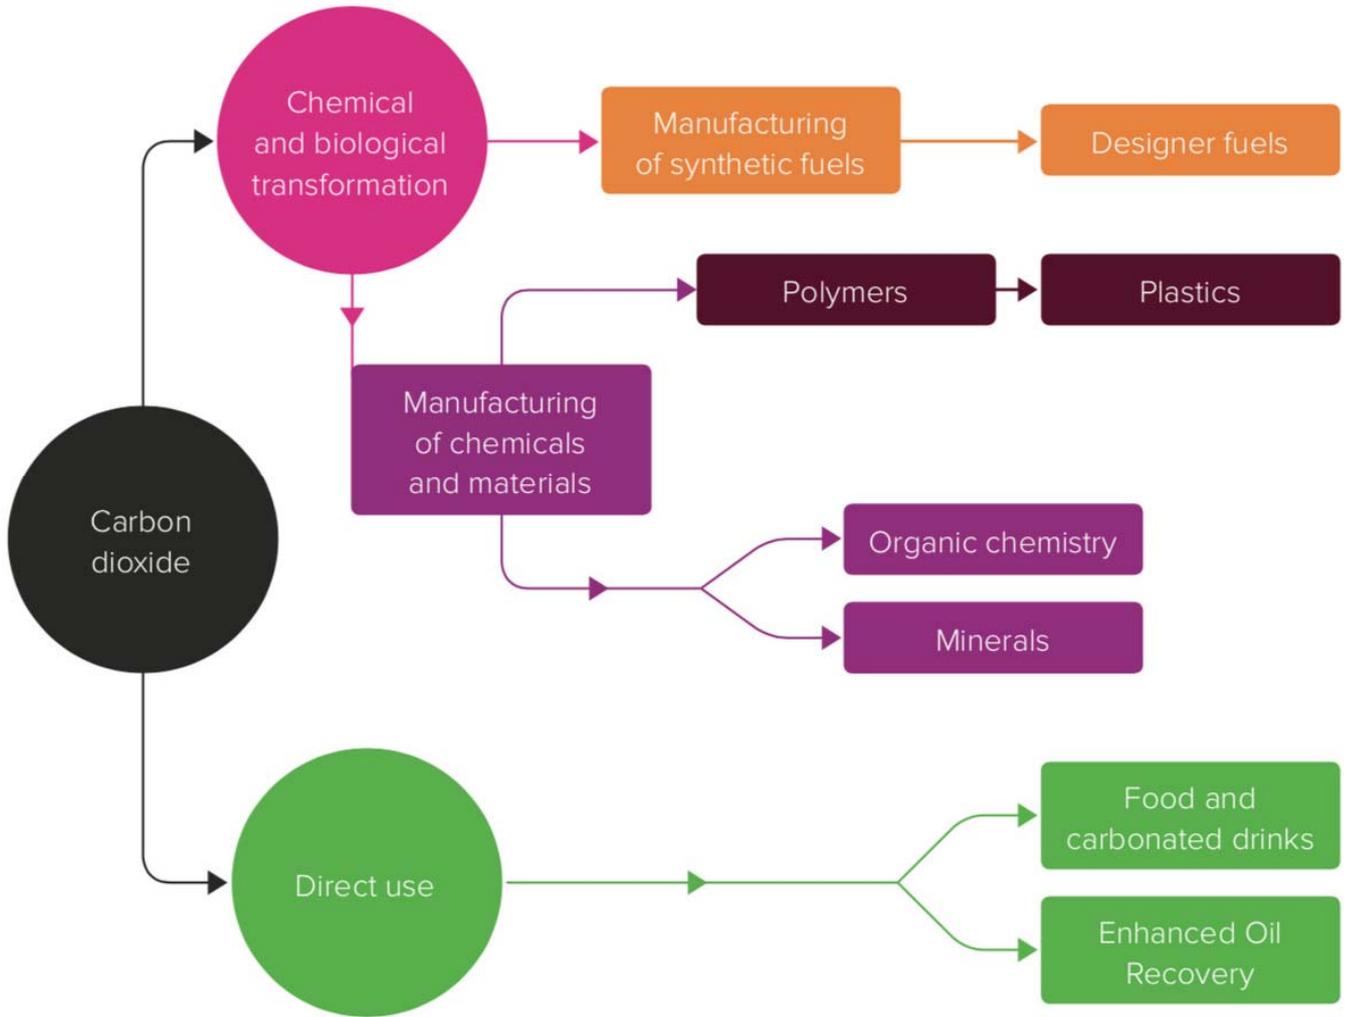

CO<sub>2</sub> GANS are increasingly used to transform agriculture practices across the world. Before sowing, for example, seeds are soaked in CO<sub>2</sub> GANS liquid plasma to decontaminate any that may be disease infected or adulterated, while irrigation of crops with CO<sub>2</sub> liquid plasma virtually eliminates the need for fertilizers and pesticides. The use of CO<sub>2</sub> liquid plasma and other such liquid plasmas increasingly provide the much needed agriculture solutions for enhancing plant growth, ensuring plant health, and increasing crop yields at minimum cost to producers.

## Crop diseases and pests

For plant diseases, CO<sub>2</sub> GANS liquid plasma creates conditions in the plant environment under which those diseases cannot exist. For crop pests, application of CO<sub>2</sub> GANS liquid plasma creates conditions under which the pests do not damage crops. In addition, pests also absorb the energy of the applied CO<sub>2</sub> GANS liquid plasma. When they absorb enough energy for their bodies' metabolism, such pests do not need to feed on the crops, thus application of CO<sub>2</sub> GANS liquid plasma creates a win-win condition for both crops and their erstwhile pests.

Uses of carbon dioxide

**Construction Materials**

- Cement and concrete
- Asphalt
- Aggregate
- Timber/super hardwood

**Fuel**

- Synthetic (methanol, butanol, natural gas, syngas, etc.)
- Micro-algae fuel
- Macro-algae fuel

**New materials**

- Carbon fiber
- Carbon nanotubes and fullerenes
- Graphene

**Industrial gas & fluids**

- Enhanced oil recovery
- Enhanced coal bed methane recovery
- Enhanced water recovery
- Semiconductor fabrication
- Power cycles

**Polymers**

- Polyurethane foams
- Polycarbonate (glass replacement)
- Acrylonitrile butadiene styrene
- Many more

**Agriculture & food**

- Algae-based food or animal feed
- Microbial fertilizer
- Biochar, bio-pesticides, bio-cosmetics

**Chemicals**

- Preservatives (formic acid)
- Medicinal
- Antifreeze (ethylene glycol)
- Carbon black
- Many more

# IMAGINE

**IF ALL THE PEOPLE WHO DON'T FIT INTO THIS WORLD CAME TOGETHER TO START OUR OWN IDEAL SELF SUSTAINING SOCIETY. THAT'S BASED ON LOVE, HAPPINESS AND HEALTH INSTEAD OF GREED, LIES, VIOLENCE AND MANIPULATION. WOULD YOU MOVE THERE?**
